AMI is an essential part of computing, found in embedded devices, servers, data centers and beyond. We've been partners with Intel for more than 25 years, with 70% percent of all server platforms everywhere powering up with AMI software. Learn about AMI culture and see our hot jobs. See AMI events, media coverage, and press releases. Reach out to our team for any sales or business inquiries. Used: An item that has been used previously. The item may have some signs of cosmetic wear, but is ... Used: An item that has been used previously. The item may have some signs of cosmetic wear, but is fully operational and functions as intended. This item may be a floor model or store return that has been used. See the seller's listing for full details and description of any imperfections. See all condition definitionsopens in a new window or tab The AMI BIOS Configuration Program (AMIBCP) for Aptio enables customers to modify parameters in a BIOS ROM without rebuilding from source. Developers can modify default values for BIOS setup parameters, modify default boot order in BIOS setup, view and edit sign-on and setup strings, and edit SMBIOS string data. AMIBCP for Aptio Data Sheet Aptio Utilities Data Sheet Aptio Utilities Data Sheet AMISDE is a command-line tool for exporting setup data from an Aptio ROM image, including spreadsheet applications such as Microsoft Excel®. It generates a helpful summary report of BIOS setup parameters and default values that enhances productivity in testing and manufacturing. Aptio Utilities Data Sheet AMISLP allows the insertion of Microsoft System Locked Pre-Installation (SLP) key files into the BIOS image. SLP keys are used for OEM activation of Microsoft Windows® 7 and Vista®. For Windows® 8.1 and Windows® 10, the OEM Activation 3.0 eModule is used in conjunction with AFU v2.35 or greater. Change Logo allows developers to easily change logos displayed by Aptio at boot. The full screen "splash" logo and small logos appearing on the main screen during POST can be replaced with custom logos. Change Logo also allows logos to be extracted from existing Aptio ROM files. Aptio V AMI Firmware Update Utility AMIUCP is a utility that is used to pre-configure the Aptio Flash Utility (AFU). Users can insert and exchange the default command string and ROM image used in AFU to create a customized version of the utility. AMIUCP supports AFU v2.35 or AFUWINGUI v1.12 or later. Aptio Utilities Data Sheet DMIEdit is a scriptable command-line utility for DOS, Microsoft Windows®, Linux and the UEFI shell. The Desktop Management Interface Editor for Aptio enables developers to modify strings associated with platform SMBIOS tables (System, Base Board, Chassis, OEM string, etc). In manufacturing, use DMIEdit to embed platform serial numbers, UUID and license keys into the SMBIOS table, which identifies platforms to management software. Aptio Utilities Data Sheet Aptio's Module Management Tool (MMTool) allows developers to manage firmware file modules contained within an Aptio firmware ROM image. Use MMTool to extract, replace and insert binary components such as modules, Option ROMs, microcode patches and ROM holes using its graphical or command line interface. With MMTool, developers can also create reports on the contents of an opened ROM image. The AMIRDT utility makes it easy for developers to dissect a UEFI ROM and produce related reports on ROM status and size. This powerful tool can dissect ROMs down to section level, dissect NVRAM Variables, compare two ROMs and search the GUIDs of a given FFS to provide a summary of their sizes from ROM. Aptio Utilities Data Sheet AMI's Customer Portal for security advisories and other announcements.
