**Re: Letter of Recommendation for Dean Daigneault**

To Whom It May Concern,

I am pleased to write this letter of recommendation for Dean Daigneault. I am a Professor of Electrical Engineering with Worcester Polytechnic Institute of Worcester, Ma. 01609.

Dean was a tremendous resource for my own research work, in particular. At that time, my laboratory was developing analog hardware for Physiologic Data Acquisition. Dean was instrumental in converting bio-metric circuit designs into finished printed circuit boards for my research.

Dean also helped to develop various mechanical enclosures and power supplies for this hardware. This equipment is quite high quality for an academic research environment. We continue to use this equipment within WPI and some of this equipment remains in use at a collaborating institution in Canada.

On a personal level, I have enjoyed interacting with Dean. He is hard-working and was quick to provide instruction and encouragement to our students (and myself!). He provided training on the use of various PCB software design tools and patiently worked with students. I felt that he was a great asset to our department. Without his support, I know that we would have struggled to complete our instrumentation. I am sure that he will bring these strengths to his future work assignments.

Sincerely,

Edward (Ted) A. Clancy

Associate Professor

Department of Electrical and Computer Engineering

Worcester Polytechnic Institute
