

# Louvers Make the Difference!

When choosing a pergola, one key detail sets companies apart: the design and strength of their louvers.

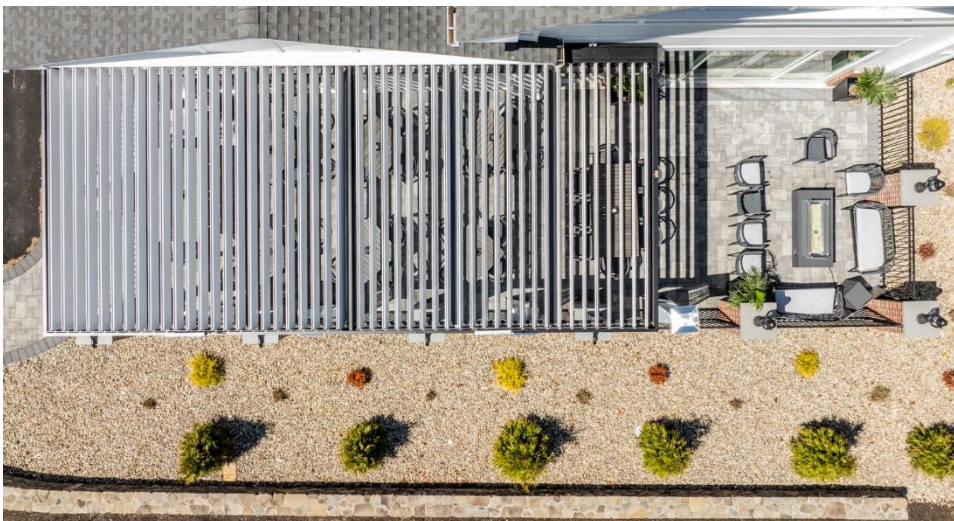

Not all pergola louvers are created equal, and at Distinctive Pergolas, we've made it our mission to carry only the top pergola lines in the industry; Sundance & Pratic.

**Sundance** pergolas feature double-wall louvers that are reinforced in six strategic locations, making them unmatched in strength and durability.

Unlike many other pergola louvers that must remain open during storms, our louvers are engineered to stay closed, providing superior protection and peace of mind. This unique design allows them to handle 40-70 lbs per square foot of snow, depending on the length of the louvers, and withstand winds of up to 120 mph when closed.

These advanced features ensure that your pergola not only enhances your outdoor space aesthetically but also stands strong against the elements. When it comes to choosing a pergola that combines elegance with engineering excellence, Sundance Pergolas stands out as the industry leader.

Let us help you design your outdoor oasis!
