

PYTCH X5 WATCH

Consumer User Manual

Pair. Receive. Play.

Simple setup for coaches, players, and teams.

Pytch Sports, LLC

Quick Start

The Pytch X5 is designed to stay simple during a game. Pair the watch to your team once, then it can receive Pytch calls sent to that team.

1

Turn on the watch

If the watch has not been paired yet, it will show PYTCH - PLEASE PAIR WATCH - TRIPLE CLICK.

2

Open pairing mode

Quickly press the side button three times. The watch displays a QR code and its Watch ID.

3

Scan with the Pytch app

In the Pytch app, use Pair New Pytch Watch and scan the QR code shown on the watch.

4

Wait for pairing confirmation

After the pairing message is received, the watch stores the Team ID. Pairing remains saved after the watch is restarted.

5

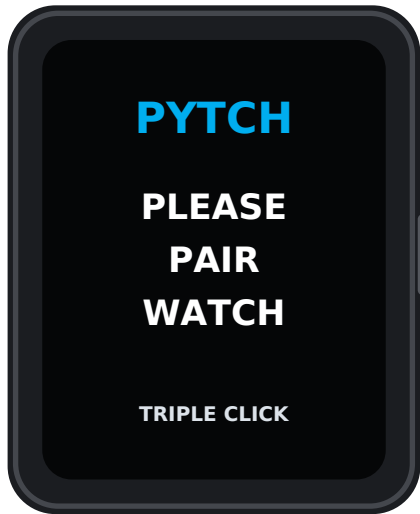

Return to the home screen

Press the side button once from the pairing screen. A paired watch shows PYTCH READY until a call is received.

Important: Each watch should be paired to the Team ID that will be used by the Pytch transmitter/app during the game.

What You Will See

The illustrations below recreate the watch screens so you can recognize each state without relying on photographs of prototype hardware.

Watch is not paired

This screen appears when the watch does not have a Team ID saved. Triple-click the side button to begin pairing.

Scan to pair

The watch displays a scannable QR code containing its Watch ID. Scan it with the Pytch app to pair the watch to your team.

Pytch Ready

Pairing is complete and the watch is ready to receive calls for its saved Team ID.

Receiving Calls

Incoming Pytch call

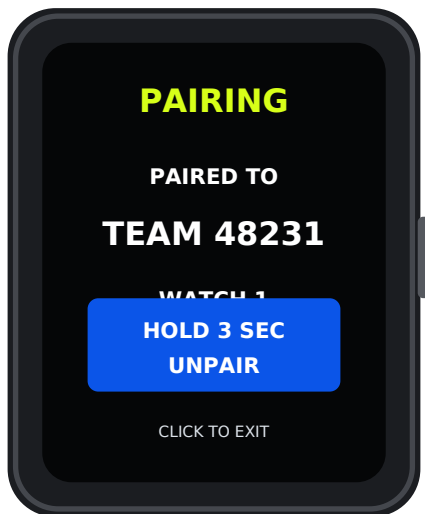

When a new call is received, the watch replaces the Ready screen with the call. For example, the screen may show BUNT. Pitch calls or other team messages may use different text.

During normal use

Keep the watch on and within operating range of the Pytch system. Calls are sent wirelessly to watches paired to the same Team ID. The watch is intended to make the current call easy to read at a glance.

Returning to the pairing screen

Triple-click the side button whenever you need to view the pairing information. If the watch is already paired, the pairing screen shows the saved Team ID and Watch ID.

Paired watch screen

A paired watch displays the Team ID it belongs to. Press the side button once to exit this screen and return to PYTCH READY or the last received Pytch call.

Changing Teams / Unpairing

- 1 Open the pairing screen**
Triple-click the side button.
- 2 Confirm the current team**
The display shows PAIRED TO TEAM followed by the saved Team ID.
- 3 Unpair the watch**
Press and hold the side button for approximately 3 seconds while on the pairing screen.
- 4 Pair again**
After unpairing, the watch returns to the unpaired state. Triple-click and scan the QR code again to pair it to the desired team.

Powering Off the Watch

Power off

From normal use, press and hold the side button continuously for 5 seconds. The display will turn off and the watch will enter its low-power system-off state.

- 1 Hold for 5 seconds**
Press and keep holding the side button until the watch powers down.
- 2 Release the button**
After the screen goes dark, release the side button.
- 3 Turn the watch back on**
Press the side button to wake the watch. Your saved Team ID remains stored, so you do not need to pair again.

Troubleshooting

The watch says PLEASE PAIR WATCH.
It does not currently have a Team ID saved. Triple-click the side button and pair it through the Pytch app.

The watch is paired but no calls appear.
Verify that the Team ID shown on the watch matches the team being used in the Pytch app/transmitter. Also confirm the Pytch transmitter is powered and sending calls.

I paired the watch to the wrong team.
Open the pairing screen, hold the side button for 3 seconds to unpair, then pair it again to the correct team.

I am stuck on the QR or pairing screen.
Press the side button once to exit and return to normal use.

The screen is completely dark.
The watch may be powered off. Press the side button to wake it.

Button shortcut	Action
Triple-click	Open pairing / QR screen
Single click while pairing screen is open	Exit to normal watch screen
Hold 3 seconds on paired screen	Unpair the watch
Hold 5 seconds during normal use	Power off the watch
Press while powered off	Wake / power on the watch

Care & Everyday Use

Treat the Pytch X5 as an electronic sports device. Keep the watch clean, avoid impacts to the display, and charge it before games or practices. Do not open the watch enclosure or attempt internal repairs.

Before game time

Confirm the watch powers on, shows the correct Team ID in the pairing screen, and returns to PYTCH READY. Send a test call before play begins so players and coaches can confirm the system is working.

Team handoff

If a watch is moved to a different team, unpair it first and complete the normal pairing process for the new Team ID.
