

The system allows for complex queries to be used to look at data in unique ways. By providing this function the club no longer needs to provide PDF documents of the schedule – all hikers, coordinators and leaders can access data in real time in a manner best suited for each individual.

Browsing the database can be achieved by accessing the full system or via the browse panels in the home page of the club website. Be aware that there is less functionality (no export or print capabilities and limited paging flexibility) provided via the club website due to software incompatibilities.

This document explains the Schedule Browse function and provides an example to start with. The final page offers some advanced capabilities including the ability to create your own filter buttons for repeat searches.
