### NOTES

Events Tokens are mobile web triggered trough traffic on msimobsenmusic through mobile 5G and higher networks RCS and cloud computing IP

Event handlers used to handle and verify user input, user actions, and browser actions when a page loads trough traffic on pages.

An event handler is a callback routine that operates asynchronously once an event takes place.

Tokenization of telecommunication and cloud computing on Mobile Social Internet Platform started March 30 2024 and revised Quarterly after.
