Huron County

Addendum to 2024 Consumer Confidence Report

The following language was omitted from the original 2024 CCR for Huron Township Water System for a reported positive total coliform bacteria result in our monthly sample.

"During the last year we were required to conduct 1 level 1 assessment. 1 level 1 assessment was completed. In addition, we were required to take 1 corrective action and we completed 1 corrective action."

Coliforms are bacteria that are naturally present in the environment and are used as an indicator that other, potentially harmful, waterborne pathogens may be present or that a potential pathway exists through which contamination may enter the drinking water distribution system. We found coliforms indicating the need to look for potential problems in water treatment or distribution. When this occurs, we are required to conduct assessments to identify problems and to correct the problems that were found during these assessments.
