

A2L Retrofit Solution

Seamless Air-to-Liquid Transition

Upgrade existing air-cooled rooms — without rebuilding your plant.

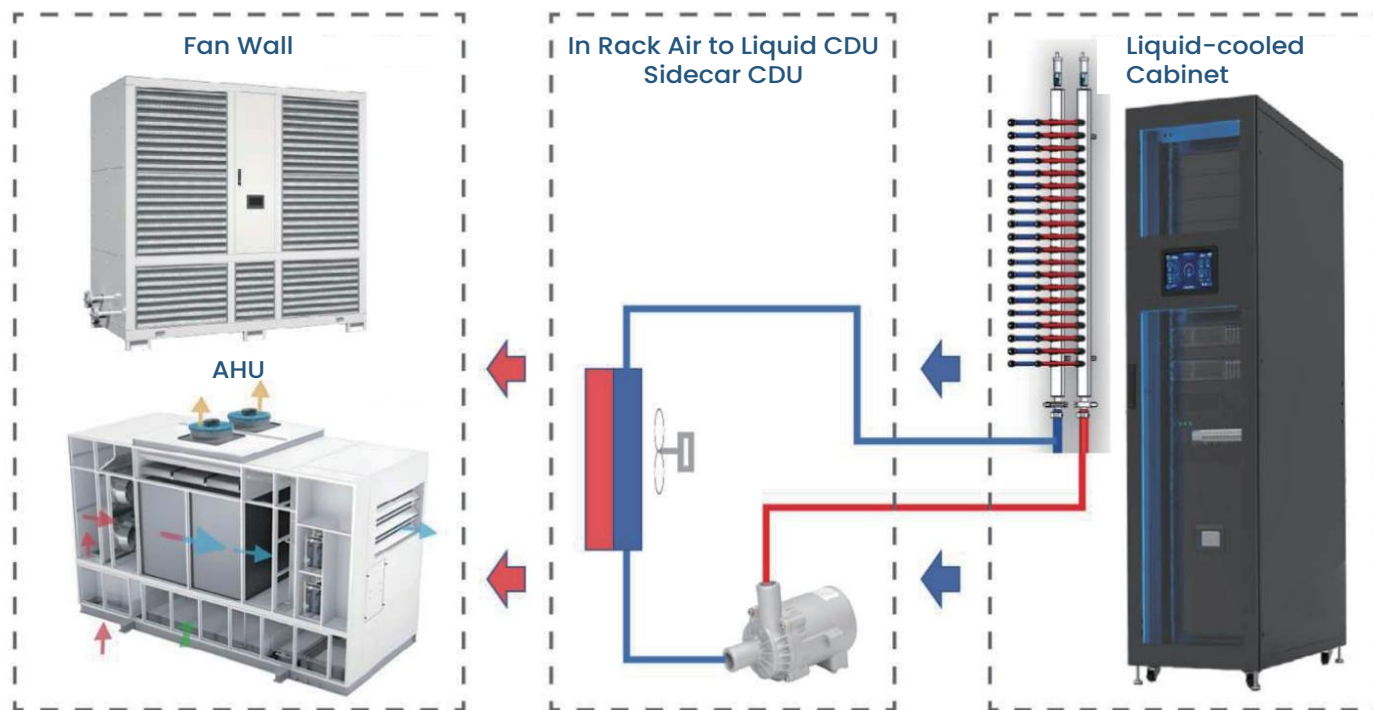

Overview

As AI rack power grows, Kryonix A2L enables smooth upgrades from air to liquid cooling.

Cold plates and CDUs remove heat from chips and discharge it through existing air systems — combining liquid performance with air-room simplicity.

Start with a single rack and scale by aisle for fast rollout, low risk, and predictable cost.

Deploy Anywhere. Run Immediately.

* A2L Retrofit System Schematic

Key Advantages

High-Efficiency Heat Removal

Stable under fluctuating AI loads.

Phased Expansion

Scale easily as density increases.

Simple Integration

Reuse existing AHUs and airflow; minimal downtime.

Reliability by Design

Redundant pumps/fans and intelligent controls.

Applications

◆ Air-to-liquid conversions

◆ Brownfield data halls
