BALUSTRADE SYSTEMS

QPC Concrete Balusters & Balustrade Systems
Established 1899 – A Legacy in Architectural Concrete

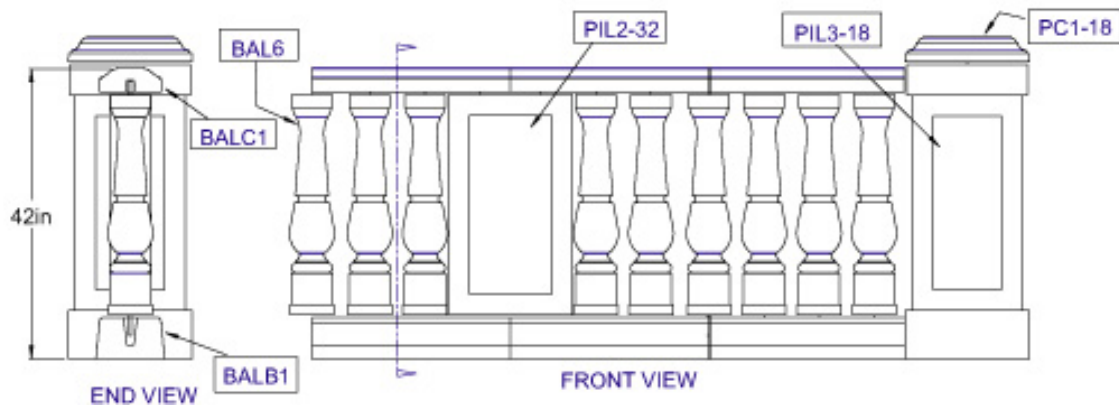

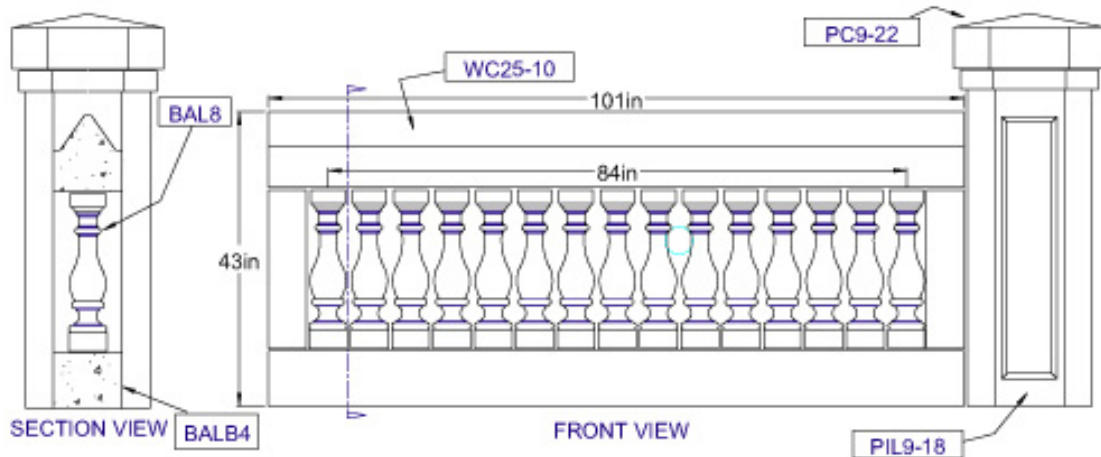

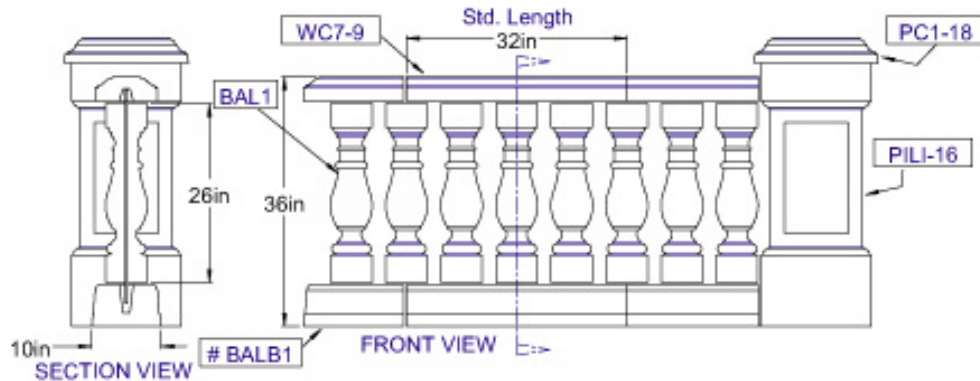

QPC Concrete Balusters & Balustrade Systems has proudly served builders, architects, and homeowners since 1899, offering complete balustrade systems in a wide variety of styles, sizes, and configurations to suit a diverse range of design and building requirements.

All baluster units are manufactured with rebar reinforcement to ensure both attachment strength and lateral stability. Due to the variety of available designs, field drilling is typically required on the base and top rail to properly accommodate the selected baluster size and comply with applicable building codes.

We strongly recommend referring to your local building codes to determine proper baluster spacing and rail height for safety and code compliance.

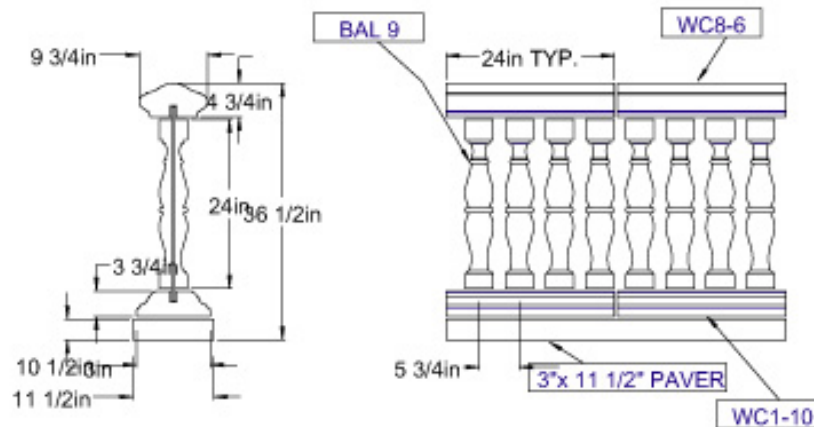

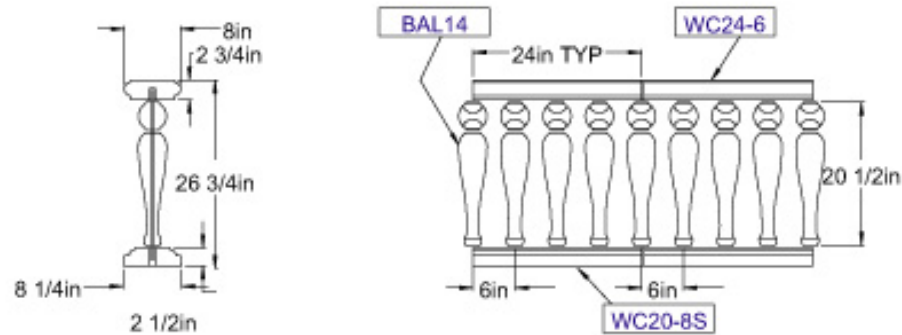

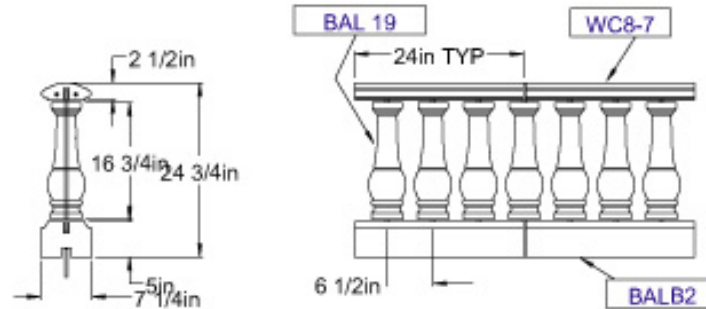

At QPC, we welcome the opportunity to produce custom balustrade styles tailored to your project's needs. Custom designs are available on a special-order basis and crafted with the same attention to detail that has defined our work since 1899.
