

Aeration & Overseeding Follow UP Treatment (no cost)

Your Aeration & Overseeding follow up treatment, a liquid soil & seed booster application called [GrowIN](#), is now scheduled (weather pending).

This application is included (no additional cost) with your aeration/overseeding service, and the primary goal is to provide a nutrient boost to ensure thick, healthy top growth, and strong, deep roots. [More info on this treatment can be found on our website here.](#)

Also, you should be fine to cut your grass for the first time at this point. Keep your mowing cut high for now, about 3.5 - 4 inches in cut height. As we move toward the end of October, you can start to lower the cut (3 inches), with your final cut of 2025 down to 2 - 2.5 inches (keeps the lawn healthier in the winter, avoiding winter mold/fungus, and allows for a quick green up next spring).

We're getting close to wrapping it up... just a few more weeks and things will look very nice by the holidays.

If you have any questions, just let me know.

We'll see you soon.
