## How did J & J & EB get VAX deal?

**'J & J' PHARMA shut down repeatedly; company behind J & J's production, Emergent Biosolutions (EB) prior in charge of the vaccine production;**

EB has been producing bad vaccines since 2017, a site where anthrax vaccine is filled into vials, workers even mixed together the wrong ingredients; then gets deal to make 100 million COVID vaccines?

## SOURCE 2:

"The plant owner behind up to 15 million botched doses of the Johnson & Johnson vaccine has reportedly been cited for quality issues before. On Thursday, it emerged that Emergent Biosolutions has repeatedly violated the FDA's quality control guidelines since 2017, earning them multiple citations for mold problems and inadequately trained employees, according to records the AP obtained through the Freedom of Information Act. The past violations were said to have happened in multiple plants around the nation, including a site where an anthrax vaccine is filled into vials." Plant workers even mixed together the wrong ingredients and distributed them.

SOURCE 3:

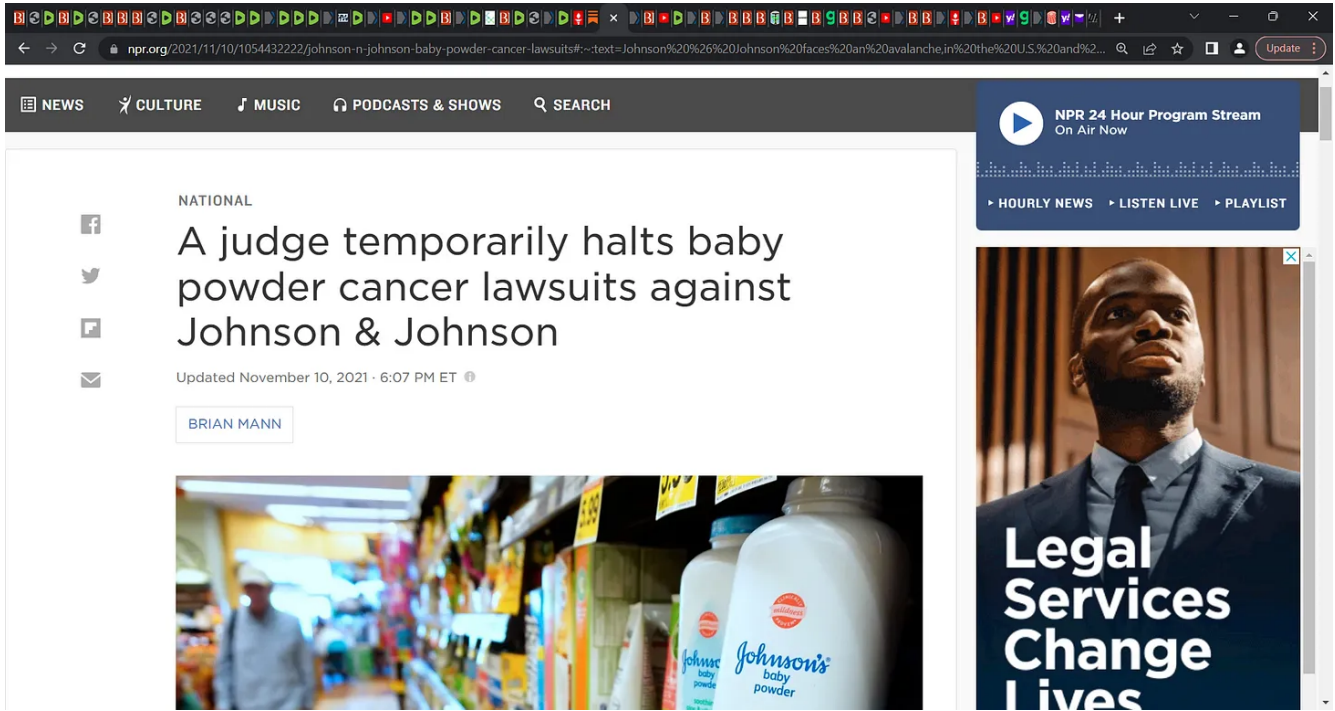

In 2020, J&J signed and announced an agreement with the government to produce 100 million doses of "Investigational COVID-19 Vaccine".

Johnson & Johnson faces an avalanche of lawsuits linked to claims that traces of asbestos in its baby powder caused ovarian cancer and mesothelioma. The company announced in November last year that its talc powder would be removed from shelves in the U.S. and Canada.

**J&J and LTL wanted the baby powder lawsuits frozen during a case review that could take years**

Last month, J&J used a controversial legal maneuver known as the "Texas Two-Step" as part of an attempt to limit its legal liability.

First the company created a new subsidiary called LTL in Texas and shoved all its

Due to my job in healthcare, I got the vaxx. I chose JJ because of the 1 shot option. I also read the risk stratified by age study report and determined that my age group had lower risk. I was already taking vitamin C/D/Zinc. Then added HCQ, ivermectin two weeks in advance; donated blood two days in advance and started on prednisone and aspirin the day of the shot and upped the HCQ and IVM. I know it was a crapshoot, and a high risk to take but I did it and I can't change it. I looked up my batch when that option became available and i'd say my batch landed in the middle for adverse reactions. I got lucky. I will NOT do it again.
