Write-up: The 3 vaccines were administered to patient on 10/12/2023 at 11:39 a.m. She was instructed on common side effects and asked to remain in waiting area for 15 minutes. Patient then left area with no issues. That evening, she began feeling bad and saw the facility nurse the next morning for vomiting. The nurse kept an eye non her until Saturday morning when she was sent to hospital and admitted to ICU. She then died sometime between then and Monday morning.

I never talk about the “symptoms” section, where so much analysis and observations can be started. The fraudulent deleting VAERS does is pretty obvious. It is not organic by any metric. VAERS is basically molding what the historical data will look like by

deleting with a purpose. In the perfect world it is proper to already published reports that are considered DUPLICATE, FAKE or FALSE. I agree, and will also point out a very reasonable (up to) 4-6wks is given to themselves to rigorously authenticate claims submitted to VAERS. And yet they still need to delete over ~31,000 C19 reports, 1,100 deaths? Yup, these clowns actually do their job very well when the intent is to deceive.
