IO HAWK NXT SKATES

"YOU WALK, WE HAWK" IO HAWK

YOU DECIDE:

USE AS HOVERBOARD

IOHAWK NXT SKATES

- » Only 3.3 kg per skate
- » Drive your skates as a hoverboard or classic hover roller skates with Autobalance function
- » Show what you have on it and use the skates for cool tricks and acrobatic stunts
- » Max speed 12 km / h, range up to 8km, max load 100kg, 2x 250W engine
- » Only 2 hours charging time and your skates are full again

Las Vegas, Jun 28, 2018 (Issuewire.com) - [IO HAWK NXT.SKATES THE NEXT STEP](#)

The first original, presented in 2015 hoverboard "IO HAWK ONE", now follows a new revolutionary high-tech means of transport from IO HAWK: With the "IO HAWK NXT SKATES" we present a completely new eMobility concept.

The "IO HAWK NXT Skates" is reminiscent of two small hoverboards that each have a tire with an outer diameter of 3.5 inches. Weighing in at just 3.3 kg per Skate, they are ultra-agile and perfect for cruising as well as cool tricks and acrobatic stunts. With an engine output of 250 watts, the Cruiser reaches a top speed of up to 12 km / h. Here, the user controls the "Hover Skates", as in the classic hoverboard, by body movements, by shifting his weight easily in the desired direction of travel.

Thanks to the integrated auto-balance function, which allows the two individual skates to remain upright after being switched on, getting on and off is child's play. The independence of both skates makes it so much more flexible than riding on an ordinary hoverboard.

Thanks to the practical connector, the H.Skates can also be quickly and easily converted to a hoverboard.

The "IO HAWK Skates" housing, which is designed in matt black and blue, is splash-proof to IP65, so even a short rain shower cannot slow down the user while driving. Thanks to the 54 Wh batteries, the boards are suitable for a distance of up to 8 km. The charging is done in about 2 hours so that the fun can continue directly after a short breather. If the eSkates run out of breath on the road, they can still be transported optimally thanks to the low weight and the side straps. The LED bulbs sitting on the rubber bumpers that you will not be overlooked in the dark and always show the battery status.
