To: Karllester Hernandez <k.hernandez@dir.nv.gov>

Mr. Hernandez,

Per your request, attached are the SDS for the HOCL and photos of the new labels for the bottles in our clinic.

It truly amazes me that I hire an individual who has a four year college degree in business with a decade of experience in hospitality operations and when he is asked to update the SDS list and verify compliance, he pulls the new spray bottles from storage and throws out the old bottles that already had proper labeling rather than to simply replace the sprayer nozzle and use the same bottle with a proper label. Then he doesn't follow through to create new labels for the new bottles. Then he contacts government offices - 12 of them - to report our non-compliance based on his own actions. One would like to believe there are laws that address this to protect Nevada companies. Again, 25 years of cocaine abuse evidently reduces one's capacity for critical thinking and also instills per the research a level of social behavior that radically changes the personality, goals and daily attitude of the addict.

Regards,

Steve Frazer, Dir.
