2025-2026 SKI POLE CATALOG

## PENCIL SHAFTS

LIGHTER, STRONGER, AERODYNAMIC

**6X STRONGER, 30% LIGHTER, DON'T BEND, MORE DURABLE, EXCELLENT FEEL AND BALANCE.**

Our patented pole design features "pencil" shafts that are 10.4 mm or 12.7 mm in diameter for better balance and feel. The shaft is the same diameter at the top and bottom.

## SHAFTS

FIRM, FLEXIBLE, SHOCK ABSORBING

**NATURAL SHOCK ABSORPTION PROPERTIES OF CARBON, LIGHTWEIGHT, FIRM, BETTER BALANCE.**

Our firm, flexible shafts take advantage of the natural shock absorption properties of carbon. Lightweight, firm performance, but less "kick back" for better balance. Easier on hands, wrists, elbows and shoulders.

## ERGONOMICAL GRIPS

COMFORTABLE, BALANCED, RELEASABLE STRAPS

**GRIPS ARE COMFORTABLE, PERFECTLY BALANCED, EASY TO HOLD, DELIVER IDEAL SWING WEIGHT.**

Our patented Inter-Loc™ hook system attach our straps and gloves to the pole more precisely than traditional straps. This creates the preferred Swing Angle™ putting more energy and control into your hand. Our Inter-Loc™ strap system allows the strap to release from the pole if enough force is applied - potential protection if a pole gets hung on a branch or twig while skiing in the trees.

## BASKETS

EASY INTER-CHANGE™

**EASY INTER-CHANGE BASKETS MAKE CHANGING BASKETS EFFORTLESS AND EASY, AND IT ONLY TAKES SECONDS.**

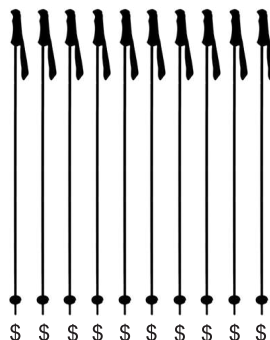

Our Easy Inter-Change™ basket system allows skiers to change baskets effortlessly and easily. Change your traditional baskets to powder baskets in seconds, simply screw a basket off, and snap a different one on.

**10X  
STRONGER  
THAN ALUMINUM POLES**

# carbon-neutral

C O M P O S I T E

*Our quest to build a ski pole that is carbon neutral has begun.*

*The grips and baskets are made of recycled sea plastic.*

*The S-Glass Composite shaft is made from sand - an abundant, natural, non-depleting resource.*

Sustainability starts with sand, an abundant fiberglass composite shaft has sand at it's core, creating a highly sustainable solution.
