Workbook** | FALL WINTER  
2026 - 2027

**ROSSIGNOL**

## Our Ski Recipe

At Rossignol, for over 100 years, technology has been at the heart of how we make skis. While they look simple on the outside, we've learned an awful lot over the last century about how to tweak the inside and make skis stand apart. Deep R&D is core to who we are, and is one of the biggest benefits you get when you choose Rossignol. As of this year, there are four key transversal technologies now forming the bedrock of our performance.

Each has its own application, but at least one of these cutting-edge technologies is now backing any Rossignol experience you sign up for.

### 4 ROCKERS

**FULL CAMBER**  
Race power control

**TIP ROCKER**  
Hard snow precision

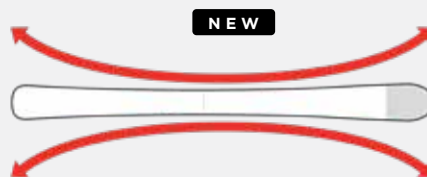

**TIP & TAIL ROCKER**  
Versatility, adaptability

**TWIN ROCKER**  
Smear & grip

### 4 SIDECUTS

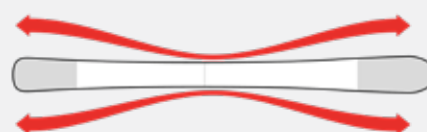

**PREDICTIVE SIDECUT**  
Intuitive flow

**OVERSIZED SIDECUT**  
Carving power

**EXTENDED SIDECUT**  
Fluid, evolutive carving

**PROGRESSIVE SIDECUT**  
Playfull fluidity

## 5 Key Technologies

**NEW**

### POWER TIP

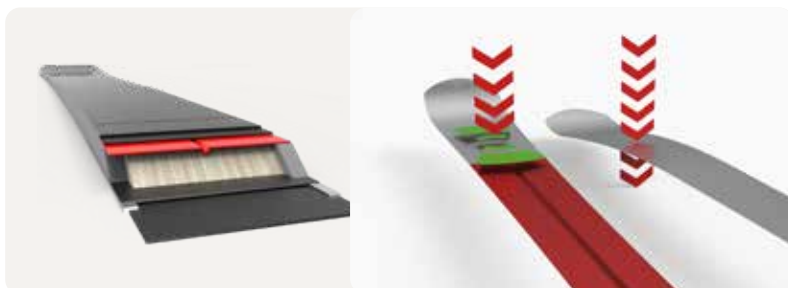

A REVOLUTION  
IN ENERGY TRANSMISSION

This innovative tip creates an interlocking connection with the ski's Titanal layer. This enables fluid energy transfer from tip to fore-body, resulting in quicker, smoother turn initiation, and a total sense of control.

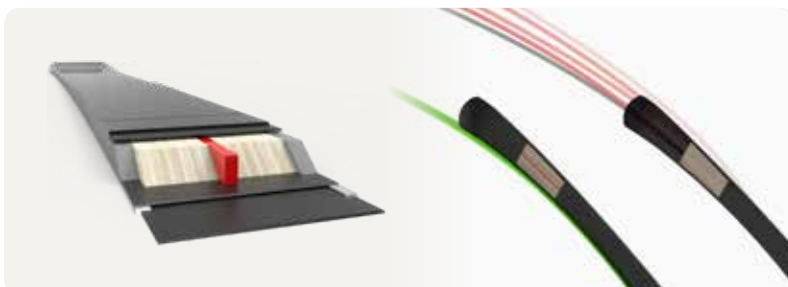

DYNAMIC FLEX  
& GRIP IMPROVEMENT

V-Profile isolates the layered components of the ski core to allow fine tuning of the flex pattern, optimizing grip and precision in every kind of turn.

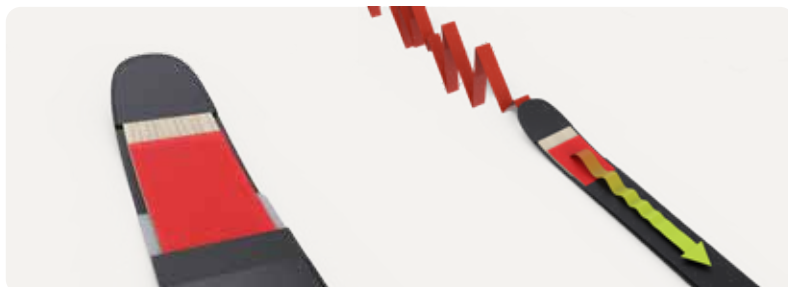

PERFECT STABILITY  
& FULL CARVE PRECISION

Line Control Technology (LCT) adds a central power rail to the middle of the wood core to eliminate counter-bending, allowing you to direct the ski's energy towards steering, no matter the condition.

VIBRATIONS ABSORPTION  
& CONFIDENT CONTROL

Vibration Absorber System (VAS) dampens chatter for smooth snow contact, delivering confidence and control in all variable snow conditions.

INCREASE FLOTATION  
& EFFORTLESS MANEUVERABILITY

Air Tip reduces swing Weight\* at the ski's extremity, making it more maneuverable and playful, while maintaining a strong platform under foot.

With the Super Project capsule collection, Rossignol pays tribute this year to a legendary icon from its heritage: the mythical Bandit B3. Born in 2005, this iconic ski embodied free exploration, instinctive performance, and bold style — a deliberate nod to its rebellious DNA and the spirit of the 2000s. Today, it's reborn in our success story through the limited-edition Super Project: a vibrant, original design paired with a complete range of technical gear and lifestyle apparel.

## Shell Technologies Hi-Speed & Pure

### DUAL CORE

DUAL CORE involves injecting materials with different hardness levels or of different types into the same mould. This makes it possible to create zones of different hardness on the boot, without adding layers of plastic. **This technology can be used to accurately fine-tune the progressive flex, rear support and rebound.** The DUAL CORE technology works in synergy with the Generative Design. It reduces weight while retaining rigidity. This is key to ensuring a high level of skiability. On the HI SPEED, PURE boots, the Dual Core technology is used on the lower part of the shell, which reinforces torsional rigidity.

### CANTING

Adjustment of the lateral angle of the cuff by +/- 1° to adapt to the shape of the lower leg.

### GENERATIVE DESIGN

The generative design saves weight by optimizing the thickness of the plastic and is mainly located under the buckles to prevent the shell from deforming during closure. This design helps produce the right weight, which varies according to the type of boot.

### CATCHES

The catches on the cuff can be adjusted to 3 positions to increase or reduce space for the calves.

### FORWARD LEAN ADJUSTMENT

This setting allows you to adjust the forward lean of the boot to make it more aggressive. In standard position - when the boot comes out of the box - the spoiler is in the low position and the angle is 10.6°. Adjusting the spoiler to the upper position creates a 6 mm forward lean and a 6 mm height gain, for a forward lean angle of 12.6°.

### FLEX ADJUSTMENT

The boot's flex can be adjusted up or down by changing the position of the screws on the back of the cuff. Central position the flex shown on the boot. Moving the screws as pictured in the diagram allows you to adjust the flex by 5 points (+/-).

## Women's Specific Features

### CUFFS

The height of the cuff is significantly lower in comparison with a unisex cuff. The tulip-shaped rear section easily accommodates a woman's natural calf shape. It is less structured to take better account of female skiers' power.

### PERSONALIZATION

Personalisation involves adjusting all possible 'mechanical' settings to tailor the boot to the skier's foot.

## Liner Technology Hi-Speed & Pure

### R'Go Fit Liner

NEW

#### 1 3 DENSITIES & 3 LAYERS EXTERNAL MATERIALS

- PES / Lycra
- TPU Film
- Alveo Heel Pockett
- Flat stitching / Seam sealed
- Enhance first fit

NEW

#### 2 INTERNAL UPPER PLASTIC SPOILER SUPPORT

- Improved leg wrapping
- No pressure point
- Consistence of fit

NEW

#### 3 CUSTOMIZABLE ALVEO NEE PE+ EVA PADDING

- High retention and comfort blend
- Improved compression set (Pack out)
- True form heat moldable

NEW

#### 4 TOE BOX CONSTRUCTION

- More anatomical

- Specific thermal insulation

Pure 125 Elite GW High Definition Liner

# Vizion Step In Technology

All skiers are looking to make their life easier when slipping on their ski boots, so we have come up with the solution.

**STEP IN**

## How does it work?

- 1 Wide open in the back.**  
For easy entry

**Articulating spoiler to re-create traditional boot construction.**  
Real overlap feel

- 3 Sliding locking mechanism connects bar to upper cuff.**  
Active locking of cuff, metal spine and lower shell  
For traditional overlap feel

- 2 Stiff metal spine connects and actively locks spoiler and lower shell.**

- 4 Activation mechanism by usage.**  
Active locking of cuff, metal spine and lower shell  
For traditional overlap feel

## Auto engage when buckled is closed

Activation

# Alltrack Step In Technology

## How does it work?

**1 Wide open in the back.**  
For easy entry / walk

**Articulating spoiler to re-create traditional boot construction.**  
Real overlap feel

**2 Stiff metal spine connects and actively locks spoiler and lower shell.**

**3 Sliding locking mechanism connects bar to upper cuff.**  
Active locking of cuff, metal spine and lower shell  
For traditional overlap feel

**4 Activation mechanism by usage.**  
Active locking of cuff, metal spine and lower shell  
For traditional overlap feel

## Activation

### Manual on / Off Buckled on / Off Buckled

Ski position / Walking position

**For rental**  
Semi-automatic

## Thermal insulation

### THINSULATE® STRETCH

Used mainly in clothing, this extremely fine fibre improves freedom of movement thanks to its elasticity. In a liner, it works ideally with the other materials to provide perfect foot support for great skiability

Snowsport helmets, when sized and fitted properly, can reduce the risk of injuries to those parts of the head that are covered by the helmet, but no helmet can protect the wearer against all foreseeable impacts or injuries. Skiing and snowboarding will expose the user to forces that exceed the limits of protection provided by any helmet, and serious injury or death can result from both low and high-energy impacts, even when a helmet is worn. Never use a helmet that has sustained a significant impact or that appears to be damaged, because damage may compromise the effectiveness of that helmet.
