OUR SKI RECIPE

At Rossignol, for over 100 years, technology has been at the heart of how we make skis. While they look simple on the outside, we've learned an awful lot over the last century about how to tweak the inside and make skis stand apart. Deep R&D is core to who we are, and is one of the biggest benefits you get when you choose Rossignol. As of this year, there are four key transversal technologies now forming the bedrock of our performance.

Each has its own application, but at least one of these cutting-edge technologies is now backing any Rossignol experience you sign up for.

4 ROCKERS

FULL CAMBER
Race power control

TIP ROCKER
Hard snow precision

TIP & TAIL ROCKER
Versatility, adaptability

TWIN ROCKER
Smear & grip

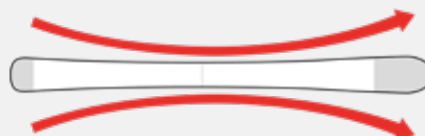

4 SIDECUTS

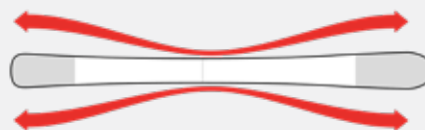

RACE SIDECUT
Carving power

OVERSIZED SIDECUT
Carving power

EXTENDED SIDECUT
Fluid, evolutive carving

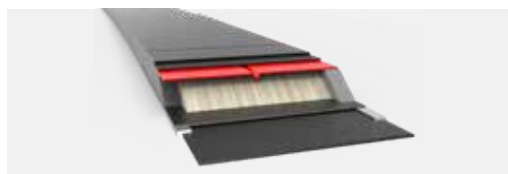

PROGRESSIVE SIDECUT
Playfull fluidity

4 KEY TECHNOLOGIES

V-PROFILE

V-Profile isolates the layered components of the ski core to allow fine tuning of the flex pattern, optimizing grip and precision in every kind of turn.

DYNAMIC FLEX AND
GRIP IMPROVEMENT

LCT

Line Control Technology (LCT) adds a central power rail to the middle of the wood core to eliminate counter-bending, allowing you to direct the ski's energy towards steering, no matter the condition.

PERFECT STABILITY AND
FULL CARVE PRECISION

V-A-S

Vibration Absorber System (VAS) dampens chatter for smooth snow contact, delivering confidence and control in all variable snow conditions.

VIBRATIONS ABSORPTION
AND CONFIDENT CONTROL

AIR TIP

Air Tip reduces swing weight at the ski's extremity, making it more maneuverable and playful, while maintaining a strong platform under foot.

INCREASE FLOTATION,
EFFORTLESS
MANEUVERABILITY

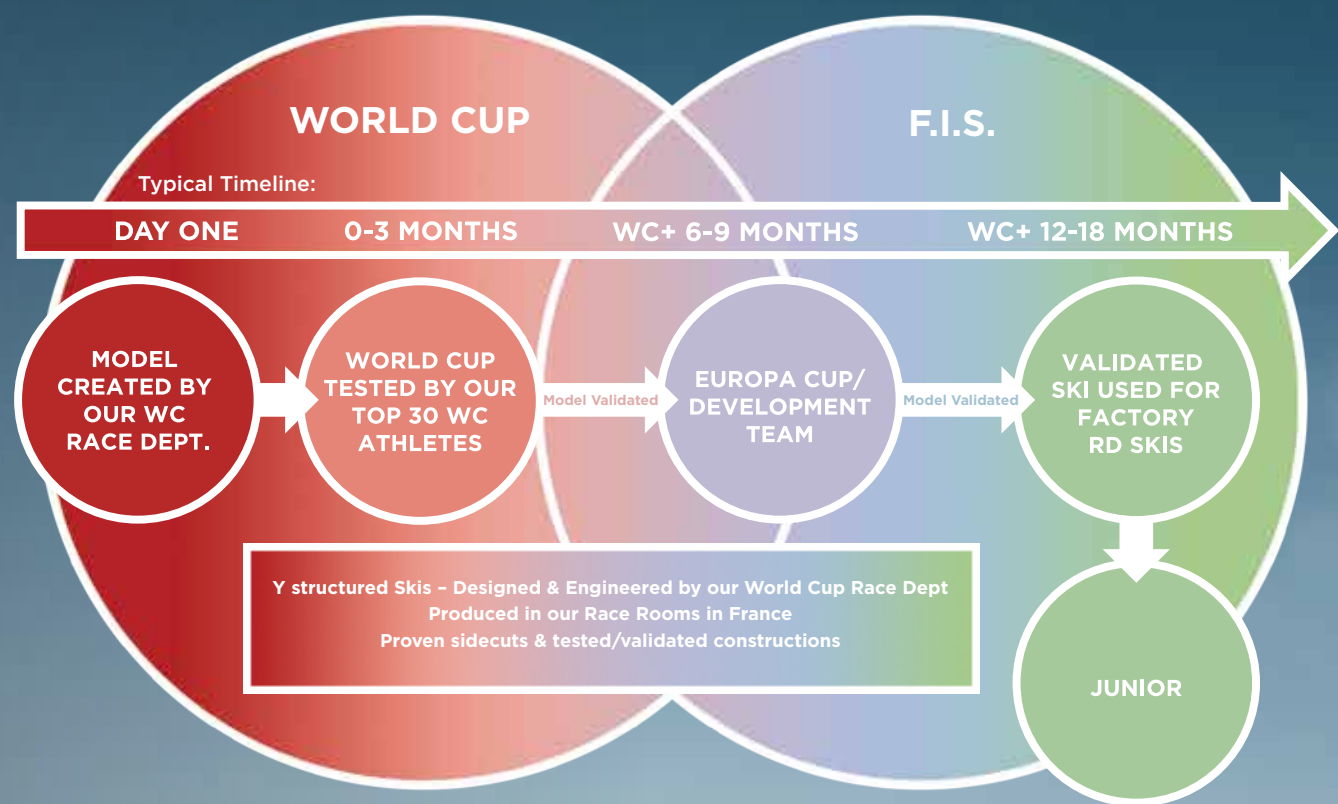

WORLD CUP +1

One-year to 18 months after a model is validated at the World Cup level, ROSSIGNOL provides the same superior quality to all FIS level athletes.

Think of it like Formula 1. The World Cup circuit is our prototyping and testing ground. It is an experimental process of trial-and-error. Our skilled World Cup athletes and technicians spend the time testing and developing, weeding out the products that give them the fastest competitive advantage. Once a model is widely adopted at World Cup and Europa Cup levels, our competition-ready race builds are available to you.

The search for the fastest, is our constant driver. So, even at the World Cup level, constructions don't necessarily change every year. When models do change, it can be as simple as modifications to lay-up or core construction, or as dramatic as a brand-new sidecut. Sometimes a specific model will clock the fastest time for years before its unseated by a new model. But the decision is always driven by timing, **and the fastest always wins.**

MADE IN FRANCE

Major recent investments in our all our race production facilities allow us to be more reactive while drastically improving product consistency and quality. Most exciting, we have re-opened and equipped, our second Race Department Workshop in Sallanches, France. This second workshop allows us to increase our production capacity to build superior race skis. Every adult FIS race ski is Made in France on dedicated Race Room production lines.

Product, People, Process. In the past 18 months all Rossignol Race facilities have been upgraded with new state-of-the-art machinery, skilled race personnel, and superior race processes. Each race production line utilizes the same machinery and process, providing the utmost level of excellence. The alignment of all of our Racing facilities allows us to constantly learn, improve and react.

This new level of commitment allows Rossignol to provide the fastest, most current race product at every level for our **BAND OF HEROES**.

Saint-Jean-de-Morains
Race Dept. Workshop

Sallanches
Race Dept. Workshop

QUALITY INVESTMENT

Why is the quality of the finished product so important? Because you work hard every day to be the fastest racer on the hill. Your race product should be perfect to help put you on the podium.

High tolerance standards is the name of the game. So each of our Race Workshops have implemented all-new tools and processes to ensure World Cup level finishes on every ski we build:

Wintersteiger Jupiter finishing machines

- Most accurate and clean WC finish available
- Precision angles
- Flat base finish
- WC #DL4 grind pattern

Laser Angle Measure Robot

- Verifies accurate edge and base angles (.5°/3°)
- Verifies base flatness and grind depth
- Capable of measuring 10x smaller than human hair thickness
- Constant controls take place during production

Additional Machines and Processes

- New CNC sidewall machines
- New Precision robot controlled top sheet tip and tail chamfering
- New Plate mounting jigs to ensure perfect centering
- New waxing application
- Multiple Quality process checks at each stage.

BAND OF HEROES

BAND OF HEROES has remained the same since its inception: **Together we are stronger.** It doesn't matter if you are scraping it out at local races or winning World Cups. It's not just about left turns and right turns. We all live the ups and downs of the ski racing life. We are in this together. A common energy connects us, binding each of us as individuals to the same community, the same band. Together we are a BAND OF HEROES.

PIVOT 2.0 15 GW SUPER EDITION

Item #	FCOPA14
Brake	B105

Rossignol's SUPER PROJECT has a singular purpose: to create a line of limited-edition products that call back to the most cherished parts of our heritage.

As a nod to one of our favorite designs of all time, the 7S from 1992, we're bringing it back, for a select time and in a limited run, through new designs of the Blackops 98 ski, the Look Pivot 15 bindings, the Heretic Mountain bike and the Revenant snowboard. New this year : discover a new retro apparel line and yellow power-inspired goggles. As burly toys built for descending gnarly mountains in all conditions, they're made to play anywhere.

BLUE STEEL

PIVOT 2.0

Embark on a new era. The Blue Steel Pivot 2.0 combines head-turning style with best-in-class performance and enhanced durability. With all the features that have made the Pivot the most trusted binding for the world's most committed skiers: Bombproof Construction, Multidirectional Release, Longest Elastic Travel, Short Mounting Zone, 7 Touchpoints and Turntable Heelpiece. It's the hero you can trust to conquer the most daunting terrain.

Make a statement on the slopes with our bold new solid Blue Steel colorway. The binding that's as stylish as a runway walk-off that would make even Mugatu jealous!

STEP IN TECHNOLOGY

How can we elevate the experience for skiers when using their ski boots while streamlining the purchasing process?

These questions were the driving force behind the development of VIZION and naturally ALLTRACK. All skiers are looking to make their life easier when slipping on their ski boots, so we have come up with the solution.

The **STEP IN technology** in the ALLTRACK range is key to broadening the target market to encompass freeride and All Mountain skiers, with boots featuring more of an all-terrain feel with a real bonus when it comes to both the walking and entry positions, all of which guarantees high levels of skiability.

Rossignol's proprietary STEP IN technology is backed by six patents. Both ranges are equipped with the STEP IN technology, and the similarities and differences relate to the mechanism.

ALLTRACK / VIZION: WHAT'S COMMON?

1 SHELL STRUCTURE + BI-INJECTED SPOILER

The shell is modelled on a traditional overlap structure and is wide open at the rear to ensure easy foot entry. An articulated spoiler recreates the last of a traditional four-buckle boot.

The spoiler is bi-injected with a:

- Highly rigid material in the centre to provide solid rear support
- Soft material along the sides to mould to the shape of the shell and offer a snug foot wrap.

2 STEEL SPINE PATENT PENDING

This rugged, articulated steel spine reinforces the action of the spoiler and acts as an anchor point for the cuff release mechanism. This anchor is located at the top of the spine.

- Highly solid rear support
- Powerful flex
- More energy.

6 STEP IN LINER FULL CUSTOM PATENT PENDING

A traditional liner construction with the ability to follow the cuff when it tilts towards the rear.

- Elasticated areas to allow the liner to follow the cuff. - patent pending
- The liner can easily be removed and refitted

The fit is the same as a four-buckle boot, with excellent heel support, and can be fully personalised using the Configuration machine.

A small elasticated component at the back of the liner secures the cuff to the liner for easy foot entry. Patent pending.

ALLTRACK / VIZION: WHAT'S DIFFERENT?

VIZION DOUBLE BUCKLE

PATENT PENDING

This double buckle provides two independent functions:

- Unlock the cuff through a cable with its inner section
- Traditional closure with the upper section

When the release buckle is opened, the cuff unlocks. When closing, the cuff returns to the ski position after flexing.

- Very intuitive and easy to use
- Automatic
- The cuff can be adjusted without having to switch over to foot entry mode.

ALLTRACK MECHANISM ENTRY/WALK

The mechanism at the back allows skiers to obtain the different positions:

ENTRY POSITION:

Open the buckles - pull the mechanism upwards - the cuff tilts backwards - slip the boot on - close the buckles - simply flex towards the front to put the boot in the ski position.

WALKING POSITION:

Open the buckles on the cuff - pull the mechanism upwards - you are in the walking position.

SKI POSITION:

All the buckles must be closed - simply flex to put the boot in the ski position.

STEP IN TECHNOLOGY

VIZION isn't magic - it's technology! Innovation was the key to this project, and no fewer than four patents covering the structure, the mechanism and the liner were registered during the design process.

1 SHELL STRUCTURE

The shell is modelled on a traditional overlap structure and is wide open at the rear to ensure easy foot entry. An articulated highback recreates the last of a traditional four-buckle boot.

2 BI-INJECTED HIGHBACK

The highback is bi-injected with a:

- Highly rigid material in the centre to provide solid rear support
- Soft material along the sides to mould to the shape of the shell and offer a snug foot wrap

3 STEEL SPINE

PATENT PENDING

This rugged, articulated steel spine reinforces the action of the highback and acts as an anchor point for the cuff release mechanism. This anchor is located at the top of the spine.

- Highly solid rear support
- Powerful flex
- More energy.

4 DUAL CORE VIZION

The Dual Core technology incorporated into the VIZION boots is used on the lower part of the shell with an injection point. The shell's reinforced torsional and flexural rigidity improves performance.

Snowsport helmets, when sized and fitted properly, can reduce the risk of injuries to those parts of the head that are covered by the helmet, but no helmet can protect the wearer against all foreseeable impacts or injuries. Skiing and snowboarding will expose the user to forces that exceed the limits of protection provided by any helmet, and serious injury or death can result from both low and high-energy impacts, even when a helmet is worn. Never use a helmet that has sustained a significant impact or that appears to be damaged, because damage may compromise the effectiveness of that helmet.

BE THE CHANGE, BE

essential

Essential, the result of a collaborative effort...

Designers, material engineers, production technicians and recycling specialists work tirelessly, hand in hand, to achieve ambitious goals and meet the challenges of design, manufacturing and marketing. From this collaborative, the Essential ski was born, a unique new Rossignol model, ecodesigned with its complete life cycle developed in a circular economy.

... Which brings together all our communities in our global and open vision of outdoor activities

Because with Essential ski we have the power to act, we invite all mountain lovers to get more involved at their own level. Because when everyone contributes with their means, and cooperation is the rule, then everything becomes possible!

CONSTRUCTION

TIP ROCKER
Hard snow precision

OVERSIZED SIDECUT
Carving power

ECO-CONCEPTION

Recycled, Certified & Bio sourced materials represent 73% of the ski.

34%
Recycled materials

39%
Bio Sourced materials

32,7%
of which is beech wood from responsible forests

The ski is recyclable at 77%, 7 times more than a traditional ski.

ESSENTIAL

Item #	RANFW01
System Item #	RRNPW01
Size	136, 146, 156, 166, 176
Sidecut	122-69-103
Radius	13 m (167)
Weight	3.8 kg / pr

35% ALUMINIUM
Recycled in organized facilities, aluminum is infinitely recyclable today.

35% WOOD
Wood chips are reused in various construction materials. We are actively working on solutions that will allow these to be reused in future Rossignol skis.

7% STEEL
Recycled in organized facilities, steel is infinitely recyclable today.

12% PLASTIC
Sorted, recovered, and repurposed as a source of energy. We work actively with the recycling sector.

5% FINE WOOD
Sorted, recovered, and repurposed as a source of energy. We work actively with the recycling sector.

6% WASTE
Throughout the different stages of grinding and sorting ski materials, only 6% goes towards waste.
