VISUAL BOOT INSPECTION

VISUAL INSPECTION OF SKI BOOTS

When inspecting a system for the skier, it is the responsibility of the shop to inspect each equipment component. This inspection checklist should be performed before any mounting or adjusting is performed.

The inspection should be posted and used on the sales floor while the customer is in the shop so that any deficiencies can be explained on the spot.

Before passing all four points of this inspection before being rented, this inspection is the first step in the "preseason inspection".

SOLE, SIZE AND OVERALL CONDITIONS
Is the sole level appropriate for the skier?
(SINGLE CODE, boot sole length?)
Is the sole in working order?
Is there excessive or asymmetric wear?
Is the sole flat or warped?

IF BINDING CONTACT SURFACES.
Are the contact surfaces not deeper than 1 mm.
Are the contact surfaces not foreign matter stuck to the sole.

INDICATIONS
Are the indications standard specifications.
Is the indicator to determine whether wear is present in the front surface and the indicated amounts should be replaced.

THE HEAD/TYROLIA BOOT INDICATOR

Art. No. 162617

This TYROLIA rental boot device is a multifunction-tool:

1. Sole length: Put the boot in the device and slide the toe stop up to the boot toe. Read sole length in the window, used for TYROLIA rental bindings: the SINGLE CODE.
2. Boot sole wear: The standardized interfaces (contact boot sole with sole logs) are important in the functioning of HEAD/TYROLIA bindings.
3. Boot toe bottom: Excessive wear is indicated if the lower edge of the front surface is at or above the bottom step on the appropriate child (C 2), adult (A 2) or touring (T 2) post (see Pict. 60).
4. Boot toe ledge height: With the toe stop against the boot toe, the level of the toe ledge should be at or above the top of the appropriate post, "Child" (C 1), "Adult" (A 1) or "Touring" (T 1) (see Pict. 61). Replace toe pads if worn.

NOTE: Any boot which passes points 3, 4 and 5, as well as conforming to the Visual Inspection Checklist, may be accepted for use with TYROLIA bindings.

Boots which fail any point should be repaired or replaced. These checks apply only to boots used with TYROLIA bindings. Consult other binding manufacturers for their used boot specifications.

CLEAN VS. LUBRICATED SKI BOOT TOE

This test is designed to determine if the boot toe is clean or lubricated.
