date of report

RESULTS:

Normal cardiovascular examination via auscultation - No evidence of congenital or acquired heart disease was noted. Since acquired heart disease may develop later, these evaluation results remain valid for one year, and annual examinations are recommended to continue to monitor cardiac health.

DNA Testing: Owner/Patient Report 7/20/2022

Submitter Information

Owner's Name Holly J Womer

Patient Information

Official Name HAJOSBULLDY GOGO

Call Name SOBA

Breed French Bulldog

Registration # NP72334101

DOB

3/7/2021 (1 Years 4 Months)

Sex

Male (Intact)

Testing Information

Submission ID 37583

Testing Date 7/20/2022

Processed By Dr. Paula Henthorn

Test Cystinuria-Associated Marker (Type 3)-DNA [Cheek brushes/swabs]

Result Information

Genotype 1-1 (Homozygous for Normal Markers)

Phenotype See Interpretation

Interpretation 1-1 (Homozygous Normal) dogs have two copies for the normal markers and NO COPIES of the markers associated with cystine stone formation in your dog's breed. A male dog with this result has the lowest risk for forming cystine stones. However, we have identified several 1-1 dogs with elevated urinary cystine levels putting them at risk for cystine stone formation. Therefore, we recommend annual urine nitroprusside test screening for intact male dogs starting between one and two years of age.

Sincerely,

Paula Henthorn, PhD
Professor of Medical Genetics
