Digitise Operations of a Bio Medical Waste management company

- Compliance with BMW Act in India

- Training Field Staff within hours

- Zero Data Entry by Field staff ensuring data accuracy

- Track gaps in servicing of customers with on screen graphical tools

- Flexibility to allow customers to generate, print and scan their own QR codes.

- Track productivity of all users and assets online, no need for followups on phone calls.

- Maintain records of sanitised material dispatched to authorised recyclers, raise challans etc.

Data Transparency in managing Municipal Solid Waste (MSW)

- Track waste from each Ward to their destination by Type and Quantity

- Digitise details of all Points of Generations

- Train Field Staff within hours, churn of drivers/helpers is not a problem.

- Bring Your Own Device model allows Municipality to work with contract workers

- Analyse productivity of each Route by Day/Week/Month etc.

- Identify gaps (Lane/Ward level) in managing MSW and take remedial actions. Measure results in real time within weeks.

- No major capex for the base module

Waste Management within Large Hospitals

Track and Ensure Compliance for Waste Management in premises

Quantify the Resource used for managing Waste in the hospital

Budget resources for the future based on actual data across all departments

Plan training of staff based on identified gaps in managing waste for an individual or a ward

Protect your brand by avoiding non compliance and providing detailed information in case of any adverse situation.
