LightStim for Acne

Hello Clear Skin

Restore Your Skin's Clear & Healthy Appearance
Calm Existing Breakouts

What is LightStim?

LightStim delivers light energy in a similar way plants absorb light energy from the sun. Each LightStim device uses different wavelengths, or colors of light. LightStim for Acne uses blue light to destroy acne-causing bacteria, and red light to help soothe and calm the skin. This helps clear existing breakouts in order to give you visibly improved, healthy-looking skin.

Professional Strength

LightStim LED light therapy devices have been used and recommended by dermatologists, estheticians, and their clients for 20 years. Now you can experience the same professional strength treatment at home.

FDA Cleared

LightStim for Acne is FDA Cleared to treat mild to moderate acne. Great for adults and teenagers.

Clinically Proven Results

In numerous clinical studies, blue LED light therapy has been proven to be an effective treatment for acne with no negative side effects.

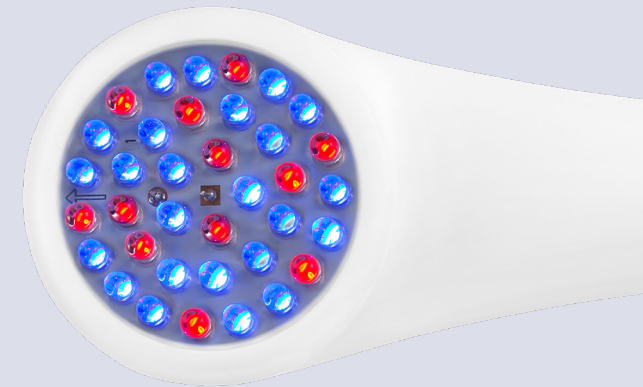

Designed to Last a Lifetime

Manufactured in the USA at the LightStim Medical Device-Certified Headquarters. Maintenance free. No cartridges, LED or battery replacement costs. Five-year warranty. LightStim for Acne comes with a 90-Day 100% Satisfaction Guarantee.

LEDs are Therapeutic

LED stands for Light Emitting Diode, which is a tiny computer chip encased in glass. Each LED wavelength (color) of light provides unique therapeutic benefits. LED is non-invasive, painless and requires no recovery time. This Light is good for all skin types and is engineered to emit a soothing, gentle warmth. LightStim for Acne utilizes wavelengths of Red and Blue with a total of 36 LEDs.

● Blue 415nm

● Light Red 630nm

LightStim MultiWave® Patented Technology

LightStim has advanced NASA's LED technology to a new level, developing LightStim MultiWave® Patented Technology to simultaneously emit multiple wavelengths (colors) of light. These wavelengths of light work together to give your skin a more radiant and clear complexion.
