LightStim for Pain

Relieve Pain Now

Soothe Your Tired Muscles & Recover Faster
Relieve Muscle and Joint Pain

What is LightStim?

LightStim delivers light energy in a similar way plants absorb light energy from the sun. Each LightStim device uses different wavelengths, or colors of light. LightStim for Pain emits light energy that reduces pain and increases local blood circulation. This increased circulation accelerates your body's recovery process and relieves minor muscle and joint pain and stiffness, minor arthritic pain, and relaxes muscles.

Professional Strength

LightStim LED light therapy devices have been used and recommended by medical doctors, health care and wellness professionals for 20 years. Now you can experience the same professional strength treatment at home.

FDA Cleared

LightStim for Pain is FDA Cleared to temporarily relieve arthritic pain, a variety of minor aches and pains, relax muscles and increase blood circulation. You can use it for post-workout soreness, accidents and sports injuries, backaches, arthritis and stiffness.

Clinically Proven Results

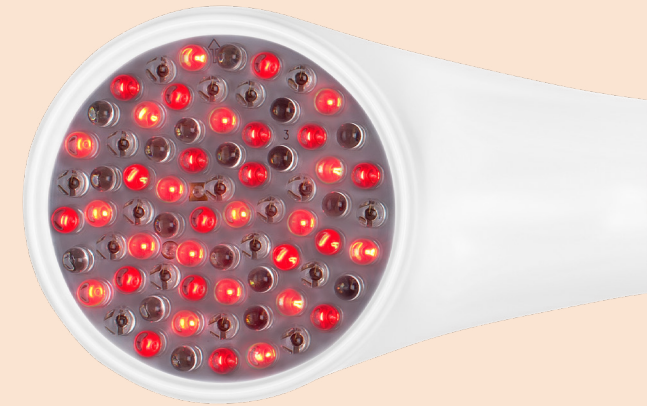

This non-invasive and chemical-free treatment has numerous studies showing no negative side effects. LED light therapy was originally used by NASA for wound healing in space. Today, it is used by medical professionals to aid in the body's natural recovery process. LightStim for Pain has been clinically proven to be safe and effective.

Designed to Last a Lifetime

Manufactured in the USA at the LightStim Medical Device-Certified Headquarters. Maintenance free. No cartridges, LED or battery replacement costs. Five-year warranty. LightStim for Pain comes with a 90-Day 100% Satisfaction Guarantee.

LEDs are Therapeutic

LED stands for Light Emitting Diode, which is a tiny computer chip encased in glass. Each LED wavelength (color) of light provides unique therapeutic benefits. LED is non-invasive, painless and requires no recovery time. This Light is good for all skin types and is engineered to emit a soothing gentle warmth. LightStim for Pain utilizes wavelengths of Light Red, Dark Red, Infrared and Deep Infrared with a total of 72 LEDs.

- Light Red 630nm
- Dark Red 660nm
- Infrared 855nm
- Deep Infrared 940nm

LightStim MultiWave® Patented Technology

LightStim has advanced NASA's LED technology to a new level, developing LightStim MultiWave® Patented Technology to simultaneously emit multiple wavelengths (colors) of light. These wavelengths of light work together to increase blood circulation and deliver a soothing treatment that sets in motion the body's inherent pain-relieving process.
