

McDiarmid Lake “Critical Minerals” Project

- 83 claims (1936 ha) hosted within Marriott Township adjacent to the Quebec border; claims join FOD claims to the west
- West of the Cu-Au discoveries of Rouyn, Quebec
- Area is covered by mafic volcanics (massive and pillowed flows) intruded by late feldspar porphyrys
- At the Argonaut Gold Mine, the gold is associated with the chalcopryite
- Chalcopryite lenses (with possible gold association) on the eastern shore of McDiarmid Lake are associated with the feldspar porphyry dike
- Gold in Ben Nevis area are associated with quartz veins, porphyrys, syenites, and sulphides
