

Quantum Triads, Sacred Identity, and the Pyramid of Light: Updating the LGB Lambda-Deltas

In light of recent theoretical expansions in both quantum structure and symbolic coherence, it becomes ever more apparent that the ancient structures of consciousness and civilization are not arbitrary — they are patterned, fractal, and mirrored in identity, matter, and meaning. In this update to the Quantum Triads, Sacred Identity article, we further develop the symbolic, scientific, and structural framework behind the LGBTQIA+ spectrum, mapped against the Pyramids of Giza, light-based coherence theory, and gravitational foundations of reality.

I. The Three Great Pyramids: Lambda-Delta Structures of Identity

If we accept that language, geometry, and identity reflect cosmic laws, then the three Great Pyramids are more than tombs or markers — they are functional lambda-delta resonators of identity. They encode the triadic coherence structure necessary for any system of observation, structure, and balance.

Thus, we propose:

- **L = Lesbians / Cheops (Khufu) – *The Birther of Light***
Cheops, the Great Pyramid, is the origin point — vast, stable, and architecturally foundational. Just as light must originate before it can be reflected or refracted, so too does this role symbolically represent the **birther or emitter of coherence**. In this sense, “L” no longer simply stands for “Lighthouse,” but becomes the **source** of the light, the womb of creation. In Greek transliteration, “Khufu” becomes Cheops — a name that aligns with **light as a divine function**. If λ (lambda) represents light in physics, then L as “Lesbian” corresponds with the primal source of divine coherence.
- **G = Gays / Chephren (Khafre) – *The Protector and Mirror of Light***
The second pyramid, slightly smaller but closely aligned in geometry and location, is **Chephren**, the guardian. If light must be protected to persist, it must also be **reflected to be known**. Chephren, and the Gay archetype it represents here, acts as the **opposing yet equal force**—the mirror, the dual, the protector of light’s direction. It embodies the moment when **separation becomes awareness**. In this reading, Gay men are not simply reflectors — they are the **custodians of perception**, the sacred “mirror” that affirms the presence of light.
- **B = Bisexuals / Menkaure – *The Spectrum or Prism of Light***
Menkaure, the smallest but no less vital, becomes the **key to coherence**. If Cheops births light and Chephren protects it, **Menkaure allows it to be seen** — not as a single beam, but as a **spectrum**. Bisexuality in this model is not indecision, but **completion** — a prism through which all identities and energies become visible and meaningful. The

Alpha and the Omega. The unifier. In this framing, B becomes more than Beacon: it becomes **aw**, the ligature of alpha and omega, suggesting the fullness of divine embodiment. If Cheops is source and Chephren is mirror, **Menkaure is prism** — the translator of divine light into visible form.

Together, they form a **triadic photonic model** of Light → Mirror → Prism.

This framing allows:

- **Lesbians/Cheops** to hold the **creative initiation** role (source/light/womb).
- **Gays/Chephren** to embody the **dualizing and protective** function (reflection/guardianship).
- **Bisexuals/Menkaure** to manifest the **coherence of multiplicity** (spectrum/refracted truth).

This is a valid, mythopoetic, and structurally defensible reinterpretation — grounded in language, identity, symbolic roles, and architectural form. It mirrors the same structure found in light physics (emission, reflection, refraction), quantum theory (observer, wave split, entanglement), and sacred metaphysics (creator, protector, revealer).

II: Lambda, Delta, and the Historical Origins of Lesbian and Gay Symbolism

The symbolism of **L = λ (lambda)** and **G = Δ (delta)** is not arbitrary — both were historically claimed by their respective communities through moments of resistance, empowerment, and visibility.

- **Lambda (λ)** was first adopted by the **Gay Activists Alliance** in the early 1970s as a symbol of **liberation** and **unity through energy** — the same way lambda denotes wavelength or energy in physics. Later, the **Lesbian community** embraced the lambda more directly, reinforcing its alignment with **emission, initiation, and coherence**. Its placement on activist flags and tombstones transformed it from math symbol to **emblem of life and resistance**.
- **Delta (Δ)** has long stood for **change** in scientific and philosophical disciplines. It was adopted symbolically by many **Gay men** as a reflection of identity in flux, challenge, and transformation. Delta's sharp symmetry and strength made it ideal as a **symbol of duality**, forward movement, and guardianship — a geometric counterpoint to the lambda's wave.

This historical grounding gives weight to their roles in the triadic model: light (λ), reflection (Δ), and now, spectrum (aw) — the **new glyph representing bisexuality** as the **embodied union of Alpha and Omega**.

III. The Sacred Ligature: Bisexuality as Alpha and Omega

In linguistic geometry, the Greek lowercase lambda (λ) often symbolizes light or emission, and has become the symbol of Lesbians, while delta (Δ) reflects structure or change and the Gay community. Between these two polarities sits bisexuality — not a midpoint of compromise, but a full spectrum embodiment of both extremes - think of these as geometric points.

If we take bisexuality as the embodiment of **Alpha and Omega**, not as the beginning and the end, but as two halves that create the whole, we observe a sacred symmetry — while the beginning and the end in pure biblical terms, this can be seen as the emission and the structure, bound within one identity. The proposal of a **ligature** — combining lowercase a and ω into an “aw” glyph — captures this visually and conceptually. It becomes a symbolic mark of divine reflection: one who mirrors both the origin and the return. The one that stands in aw(e).

In this reading, bisexuality represents not indecision but **integration** — the closest embodied reflection of the god-image mentioned in Genesis: “God created ‘adam’ in their image.” The original Hebrew does not denote a gendered man but a unified, dual-natured being.

In light of this, the bisexual identity becomes a **prism of coherence**, embodying unity and multiplicity, polarity and fluidity — a bridge between the divine origin and the manifested spectrum.

IV. The Guardians of Coherence: TQIA+ as Quantum Field Relativity

Surrounding the three great pyramids are numerous smaller pyramids and tombs — not less important, but defined by their relative position to the triadic core. These echo the roles played by the TQIA+ spectrum:

- **T = Transcenders** — Those who move between states, collapsing dimensional binaries.
- **Q = Questioners** — The quantum states, indeterminate until observed.
- **I = Intersectors** — Interweaving multiple layers of identity and dimension.

- **A = Asexuals/Agender** — Often dismissed as non-participants, they may in fact form the vacuum lattice — the zero-point field of identity.
- **+ = The Expanded Field** — All others. Undefined, shifting, emergent.

Together, these are the **Guardians** — not separate, but coherent only through their relationship to the core triad. Like graviton fields, they cannot exist in isolation, but shape and are shaped by the presence of the central pyramidal triad. They form the **resonant string** between the Gatekeepers, the Guardians, and the Groundskeepers. Without the **Gatekeepers**, this entire string would collapse — coherence would unravel. In this structure, **the Guardians serve not beneath but beside**, functioning as dynamic stabilizers of meaning and identity.

V. The Gg Foundation: Groundskeepers and Gravitons

In quantum gravity theory, gravitons (g) are the dimensional locks — the particles that anchor all others in place. Without them, there is no structure, no mass, no time.

We now propose that the straight and binary population, when abstracted symbolically, represent this **Groundskeeper** class — not in a subservient or hierarchical way, but as the invisible foundational lattice on which relative identity is built.

They are the **gravitons** of the human coherence spectrum:

- Omnipresent but often unacknowledged.
- Unchanging but vital.
- Necessary for the dance of polarity and perspective.

In social systems, they provide the **baseline** — the assumed constant. But as with all systems, constants are only meaningful when contrasted with variables. The LGB triad and the TQIA guardians create **contrast, dimension, and reflection**.

VI. On the Community Discussion: Splitting LGB from TQIA+

There has been deep and ongoing dialogue in the LGBTQIA+ communities about whether the original LGB triad should stand apart from the expanding TQIA+ spectrum. This division, while controversial, can be understood through the lens of dimensional coherence and balance:

- In a coherent system, separation is not a sign of fracture, but of functional clarity.
- Just as the pyramids must be distinct structures to achieve geometric stability, so too must roles and spectrums find distinction to avoid collapse into incoherence.

Separation, in this context, is sacred. It honors difference, while preserving the **dynamic relationship** required for meaning.

The TQIA+ community is not a derivative, but a **guardian field** — a fractal reflection that helps sustain, support, and challenge the core triad.

VII. The Observer's Lattice: All Roles Require Observation

From a metaphysical and quantum standpoint, nothing exists without observation. Thus:

- The LGB Triad projects coherence.
- The TQIA+ Guardians stabilize coherence.
- The Groundskeepers (Straight/Binary) anchor coherence.

But all require each other to be seen.

Each group becomes real only through its **relative interaction** with the others. In this way, identity is not static — it is relational, mirrored, and recursive.

This is the **Mirror Principle**.

This is **Fractal Coherence**.

This is **Sacred Structure**.

And so the pyramid continues — stone by stone, beam by beam, spectrum by spectrum — built not only on history, but on **observation itself**.
