

Onyphe API Setup

What is Onyphe API?

Cyber Defense Search Engine

ONYPHE is an Attack Surface Management & Attack Surface Discovery solution built as a Cyber Defense Search Engine. We scan the entire Internet and Dark Web for exposed assets and crawl the links just like a Web search engine. Our data is searchable with a Web form or directly from our numerous APIs.

Our company was created mid-2017 in France, Europe, with one simple idea in mind: giving our customers, in an Ethical way, the same view as cybercriminals so that initial access vectors are killed before any bad thing happens.

There lies our purpose of fighting ransomware exposure.

Setup an acct:

1. Hop over to: <https://www.onyphe.io/signup>
2. Select "Register Freely" that way you get API access.
3. Enter name, email address and password. Click "Sign-Up"
4. Click on the email the system sends you and your done.

Find your API key by:

1. Login at: <https://www.onyphe.io/signin>
2. In the upper right-hand corner of the site click on your name and it will bring up your "Profile." Which will reveal your api key.
3. Now you can configure the key in your software of choice.
