Pavement Design Project – Fort Gordon, Augusta, GA

Provided traffic data for pavement design project on Fort Gordon military base located in Augusta, Georgia. Collected 24-hour bi-directional vehicle volume, speed and classification counts at 33 locations. Conducted turning movement counts during AM and PM peak hours at 29 intersections.

Prepared investigative reports for each intersection and corridor including existing conditions, traffic control devices, sight distances, digital photographs and sketches. Project was completed on time and on budget.
