- **Decorative Hardware** - ships separately
- **DTC** - Concealed soft close hinges & slides
- **Cabinet Door Finishes** - TFL & Melamine

Door Styles

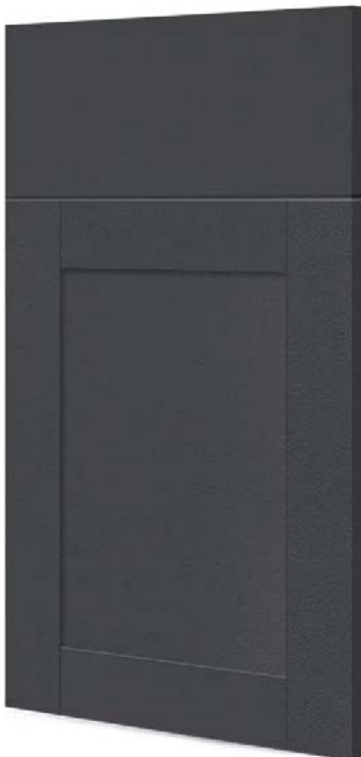

Slab

A slab door is a single, flat piece of material that is used as the front of the cabinet. It offers a clean and modern look, with a smooth and simple surface that is easy to clean and maintain.

AVAILABLE IN

Thermofoil

Melamine

5-Piece Shaker

A 5-piece shaker door is constructed from five separate pieces joined together to form a frame and panel design. The frame surrounds a recessed panel, giving the door depth and dimensionality. It offers a classic and timeless look that works well in a variety of design styles.

AVAILABLE IN

Thermofoil

Melamine

Good design doesn't have to be expensive.

LunaCraft offers premium cabinets at a great value, creating a foundation for beautiful, high-quality kitchens and baths. Our casework finishes are intentionally curated with design and performance in mind, ensuring durability and longevity. LunaCraft offers a range of construction options to fit your budget and needs, from cost-effective to luxury designs.

With a variety of finishing options, including Melamine & Thermofoil our casework is durable and easy to maintain. Applicable to both commercial and residential environments, LunaCraft provides you with versatile and timeless solutions between styles and colors. Choose LunaCraft for premium quality and enduring style.

Finish Options

Melamine

Melamine cabinets are made from a type of resin that is bonded to a particleboard or MDF (medium-density fiberboard) substrate. The melamine finish is highly durable, scratch-resistant, and easy to clean. These cabinets are available in a variety of colors and finishes.

Thermofoil

Thermofoil cabinets are made from a thin layer of vinyl that is vacuum-sealed onto an MDF substrate. The resulting product is highly durable, moisture-resistant, and easy to clean. Thermofoil cabinets are available in a wide range of colors and finishes, including wood grain or stone patterns.

CARE & MAINTENANCE

BASIC CLEANING:

- Use a clean, soft, and lint-free cotton cloth dampened with warm water or a mild cleaner, if necessary, for cleaning your cabinet frames, fronts, shelves, and other wooden surfaces.
 - Use only cleaning agents intended for the materials you have.
 - Avoid damaging cabinet stains and finishes by blotting the surface instead of wiping when cleaning.
 - Never use a dirty or greasy cloth to clean cabinetry.
 - Harsh detergent residues may damage finishes.
 - Spills, water spots, and grease will come off easier if removed promptly.
 - Make sure cabinets are dry after cleaning. Avoid excessive moisture on wood cabinets.
 - Check areas around the sink and dishwasher to make sure that water and detergents do not dry on the cabinet surface.
 - Do not leave printed materials (newspapers, magazines, etc.) on cabinet surfaces as printed ink can bleed into the finish.
 - Avoid using a dirty dishcloth or a sponge to clean cabinet surfaces as it may contain remnants of harsh detergents that can harm the finish.
 - The following products and ingredients can damage cabinets and should be avoided:
 - Petroleum-based products
 - Solvents
 - Bleach
 - Strong detergents and soaps
 - Nail polish remover
 - Paint thinners
 - Wire brushes
 - Steel wool
 - Abrasive
 - Scoring pad
 - Ammonia
 - Soaps with dye
 - Self-polishing waxes (especially those that contain silicone)
-

AVOID EXCESSIVE MOISTURE & HEAT:

- Avoid draping wet or damp dishtowels over cabinet doors.
- Give special attention to areas around the sink and dishwasher.
- Do not attach towel racks to interior cabinet doors.
- Use trays under potted plants to catch excess water.
- Avoid placing small kitchen appliances, like coffee pots or toaster ovens, where heat or steam is directed onto cabinet surfaces.
- Always protect wood surfaces by using hot pads under hot items

AVOID ABRASIVES:

- Never use scouring pads, steel wool, wire brushes or powdered cleaners.
- Do not allow oven cleaners to contact any part of the cabinets.
- Avoid sliding objects across cabinet surfaces.
- Be careful with knives and other sharp objects that can damage cabinet surfaces.
