The PROJECT _ creates a connection to the architecture of the region. The PROJECT _ borders a farm, which features the local architectural style. We utilised modern, minimalist design strategies, but mapped out the spaces using the concept of a rectangular building complex. Instead of building vertically, the project spreads over the site horizontally, comparable to local vernacular architecture. To build, materials such as cellular light concrete blocks and bamboo or ipel ipel tree wood were locally-sourced and/or repurposed.

The PROJECT - that encourages people to explore and participate in the built environment. The PROJECT Build IT! exhibit teaches people the vocabulary of building so that they can build and interact with their built environment in a personal way that reflects and empowers them as individuals. It is also an accessible and practical context for exploring

The PROJECT- are investigator.

The PROJECT - make probes.

The PROJECT - have no point of view. We do not stay in one position.

The PROJECT - don't EXPLAIN

The PROJECT - EXPLORE.
