GEBERIT INSTALLATION SYSTEMS

Distinctive... Sustainable... Uncompromising

Geberit Installation Systems keep the unsightly out of sight.

AESTHETICS

Safely hidden behind the wall, Geberit in-wall technology allows unique beauty from floor to ceiling.

WATER SAVING

Geberit dual-flush technology provides an effective flush volume of 1.1 GPF, exceeding the 1.28 GPF High Efficiency Toilet (HET) standard.

SPACE SAVING

Putting the unsightly toilet tank in the wall, where it belongs, gives you more room. The entire bathroom is safer and more accessible.

EASY TO CLEAN

Because the toilet is off the floor, cleaning the entire area is easy.

FLEXIBILITY

The adjustable-height carrier allows you to position the toilet 15" to 19" off the floor for meeting ADA requirements or personal preference.

STRENGTH AND STABILITY

The Geberit installation system supports up to 880 lbs., exceeding ASME A112.6.2 strength requirements.

ACCESSIBLE MAINTENANCE

The Geberit installation system offers easy access to all internal components, including the fill and flush valves, through decorative actuator flush panels. No tools are needed for simple changeouts.

The unique dual-flush valve saves water and is practically maintenance free. Geberit also offers cable-controlled bath waste and overflows in a variety of designer finishes. Critical working parts are outside the waterway, ensuring years of trouble-free operation.

IT'S GEBERIT

IT'S CABLE-OPERATED

Unlike other styles of bath drains, the Geberit Bath Waste and Trap critical working parts are outside the waterway to prevent clogging. The high quality cable is crafted from Teflon® coated stainless steel and has a plastic sleeve to deliver years of trouble-free service.

STYLES TO MEET YOUR NEEDS

PushControl BWO

The Geberit PushControl BWO offers a thin, elegant look.

SELECTING A TRIM FINISH

The distinctive contoured handles are offered in a wide variety of finishes to match almost any décor. ForeverShine™ finishes have been developed to ensure that the quality and look of the product on which it is applied will last a lifetime. Clean up is simple and requires no abrasive cleansers or chemicals so maintaining the original factory finish is easy.

We are so confident of this finish process that we provide a limited lifetime warranty on ForeverShine™ products installed in residential applications.

MATERIAL SELECTION

Tubular Plastic

Plastic (polypropylene) is used chiefly for molded parts, electrical insulation, packaging.

Tubular Brass

Brass is a yellowish alloy of copper and zinc used for enhancing items such as the Geberit BWO.

ABS

ABS (Acrylonitrile, Butadiene, Styrene) is a plastic that's hard and durable through a broad range of temperatures.

PVC

PVC, polyvinyl chloride, a widely used thermoplastic polymer, is tough, dent-resistant and maintains properties over long periods of time.

SELECTING A REMOTE

The Geberit Remote BWO Cable Drain features the same quality and performance as our full line of bath waste and overflow products, but with remote access possibilities. Its unique two-headed design gives you the flexibility of handle placement for ADA applications.

JOINTS

Slip joints are used when the drain will be accessible for maintenance. Glued joints are used for non-accessible drains. Geberit supplies tubing for slip connections with BWOs, but does NOT supply ABS/PVC piping for glued connections.

BATH WASTE AND TRAP SYSTEMS

Selecting the Right Size Bath Waste and Overflow

FOR CONVENIENCE, USE THIS PAGE WHEN SIZING YOUR CABLE LENGTH.

Sizing a Geberit cable drain is simple. Start with acquiring the **Tub Depth** (see **FIGURE 1**), which serves as a rough guide for your final selection. While the actual definition of “tub depth” varies by manufacturer and model, the measurement is used to get a rough idea of the cable length you will need. Use the **Standard Rough-In Unit Cable Lengths** chart (below, right) to determine cable length based on your tub depth.

To assure your rough calculations are correct and your BWO will function properly, however, please follow these steps (refer to **FIGURE 1**).

1. Determine the **Overflow Depth (A)** which is the distance from the overflow center to drain mounting surface.
2. Determine the **Drain Shoe Length (B)** which is the distance from the drain centerline to the overflow mounting surface.
3. Choose **material** and joint **connection type**. Because material selection and joint preparations selection are covered by local codes, be sure a professional contractor is involved. Geberit offers a complete spectrum of BWO materials to assure code compliance (see page 33). The materials offered are Tubular Polypropylene, Tubular Brass, ABS and PVC.
4. To determine the **final size** of your BWO for **Tubular Slip-Joint Plastic/Brass** cable drain, use **FIGURE 2** on page 35. To determine the final size of your BWO for **glued ABS/PVC** cable drain, use **FIGURE 3** on page 35.
5. Your information can now be used to find the part number on each type of Geberit BWO.

Once you have determined the size and part number, you can also give this information to your sales outlet so they can verify you have the right Geberit model for your needs.

Standard Rough-In Unit Cable Lengths

Key	Typical Tub Depth*	Cable Length
■	12"–16" (301–402)	17" (432)
■	17"–24" (427–602)	27" (678)
■	17"–24" (427–602)	33" (828)
■	25"–29" (628–728)	43" (1,079)

Selecting the Right Size Bath Waste and Overflow

FIGURE 2

Standard Tubular Slip Joint Rough-In Unit Cable Length Configuration Guide

Use this chart to figure cable needed for Plastic/Brass standard Tubular installations.

Example:

Ⓐ Overflow Depth = 14"

Ⓑ Drain Shoe Length = 7.5"

Requires a Rough-In Unit with a cable length of 27".

Custom installations can be achieved using standard Tubular Rough-In Units provided cable length is within acceptable range illustrated by shaded areas in guide.

Geberit recommends you review any custom installations with your sales outlet to assure you have the right model for your needs.

FIGURE 3

ABS/PVC Glued Rough-In Unit Cable Length Configuration Guide*

Use this chart to figure cable length needed for ABS/PVC glued custom installations.

Shaded areas indicate acceptable range of measurements for each cable length.

Example:

Ⓐ Overflow Depth = 22.5"

Ⓑ Drain Shoe Length = 12.5"

Requires a Rough-In Unit with a cable length of 43".

Geberit recommends you review any custom installations with your sales outlet to assure you have the right model for your needs.
