

We Take Data Security Very Seriously

We have the following data security protocols in place to ensure your customer data is safe

We use industry-standard encryption to protect your information, both when it's stored and during file transfers.

Access is strictly controlled: Only authorized personnel can access your files, and each dealership has its own private and secure folder.

We monitor for security threats: Our system is regularly updated and monitored to stay ahead of potential risks.

Backups keep your data safe: Your data is automatically backed up daily to ensure it's never lost.

We follow strict privacy standards: Our processes comply with major privacy laws like CCPA to protect your customers' information.

Your data is shielded by top-tier security: Advanced firewall protections (OPNsense) monitor all network traffic to block threats and unauthorized access.

Private, secure connections: VPN technology (OpenVPN) ensures that only authorized users can securely access the system from external locations.

ADS will provide a Data Processing Agreement (DPA)
