

E-Z Hog Restraining Trap

The hog walks into the Restraining Trap until its weight trips the bottom. Bottom falls away, wedging the hog between the sides. The operator is then able to stun the hog with a humane stunner and trip the latch, releasing the hog on its side for easy shackling. The Restraining Trap is balanced to trip and return without using air or hydraulic assistance. The E-Z Hog Restraining Trap is sturdily built for long, hard use. It is made of heavy-duty Stainless Steel, Galvanized mild steel or Painted mild steel. Dimensions: 76" x 40" x 52" high (193 x 102 x 132 cm). Weight: 900 lbs (408 kg)

Customer Feedback: 40 to 340 pound hogs
