“Swiftwater/Flood Rescue from Vehicles in Water”

August 15, 2026
Wisp Whitewater
Center
McHenry, MD

Rescue 3’s specialized workshop for Swiftwater Technicians covers the skills required to conduct vehicle-rescue operations in flood and swiftwater environments. Using purpose-designed in-water training vehicles in class I-III swiftwater conditions at one of the nation’s premier whitewater venues. **The Rescue 3 Northeast Instructor cadre is the only training provider in the country that delivers realistic training, operating under day-to-night conditions** with multiple vehicles in various flows and conditions. This course covers vehicle behavior and stabilization in water, access techniques, multiple rescue options, and single-victim to multiple-victim extrication. Rescues from vehicles in water are a growing hazard faced by fire & rescue services. While generic swiftwater rescue technician skills and techniques can be applied to these rescues, current training does not provide realistic, specific exposure to these incidents. Don’t let yourself or your team miss this realistic training.

Course: 1000- 2000 hrs. - Tuition: \$375.00

Prerequisites: Swiftwater Basic

Personal Equipment: Personal flotation device (PFD), Full dry suit or wetsuit, Thick-soled water booties or sneakers, Water rescue helmet, and gloves.
