Related injuries can be severe requiring more hospital days and resulting in more lasting residual effects than injuries in other activities. (Initial here: _____)

NATURE OF RIDING HORSES - No horse is a completely safe horse. Horses are 5-15x times larger, 20-40 times more powerful and 3-4 times faster than a human. If a rider falls from a horse to the ground it will generally be a distance of from 3 1/2' to 5 1/2 feet, and impact may result in injury to the rider. Horseback riding/driving is the only sport where one much smaller, weaker predator animal, the human, tries to control and become one unit of movement with another much larger, stronger prey animal, the horse, with each having a limited understanding of one another. If a horse is frightened or provoked it may divert from its training and act according to its natural survival instincts which may include, but are not limited to, stopping short, changing direction, or speed at will; shifting its weight from side to side, bucking, rearing, biting, kicking or running from danger.
