ADVISED AFTERCARE MAGNETIC TATTOO REMOVAL ACTION

OUR NON-INVASIVE TATTOO REMOVAL TECHNIQUE:

- It is not a 100% chemical tattoo removal action as the Lactic Acid or Glycolic Acid nor the chlorine.
- It is not surgical.
- It is not a saline solution.
- It is not a dermabrasion.
- It is not a Cryotherapy (cold therapy) tattoo removal. - It is not a laser action.
- It is not an Acid or Saline tattoo removal.

Our Tattoo Removal product is an Alkaline PH= 8.5, However, the following advice should be respected. Our technique does not use thermal waves as does the laser, therefore, the action is painless, the result is guaranteed, with obviously sessions, by respecting the following rules below.

It is the similar process to permanent make up action, except that the Cartridge does not penetrate into deep skin, it does barely graze it.

Our tattoo removal product has a white color. After putting it on the tattooed area, the color turns gradually to green after several sessions. This fact is due to the mixture that happens between the

tattoo removal product and the iron oxide contained in permanent make up pigments.

The main components of our tattoo removal product are food and cosmetic molecules which is not dangerous for your health or your skin.

⇒ **To sum up:**

- Should not scrub the skin with fingers or a pencil or make up.
- Avoid putting tight clothes on the treated area.
- Do not go to hammam or sauna or swimming pool for 10 days. - Avoid make up on treated area for one week

⇒ **Prevention & Post care**

- Apply the healing Aftercare that is proposed to you.

⇒ Apply Aftercare 3 - 4 times a day after treatment session in order to maintain the integrity and moisture of the treated area especially in removing permanent make-up

IMPORTANT REMINDER

- The number of sessions depends on the pigment's quality, quantity in the skin, skin depth, the tattoo's age and surface of tattoo

. It also depends on everyone's skin phenotype.

- The treated area can be tattooed after a total skin recovery:

⇒ 1 - 2 month for lips PMU

⇒ 2 - 3 months for eyebrows permanent make up.

- The Magnetic Tattoo Remoov™ does not cause any scar damage skin, or hair loss.

- This technique is 100% guaranteed if you follow the service provider's advices.
