Mass Casualty Incidents at Sporting Venues Are you ready for the next disaster?

Kori Hudson, MD, FACEP, FACSM
Professor of Clinical Emergency Medicine
MedStar Georgetown University Hospital, MedStar Sports Medicine

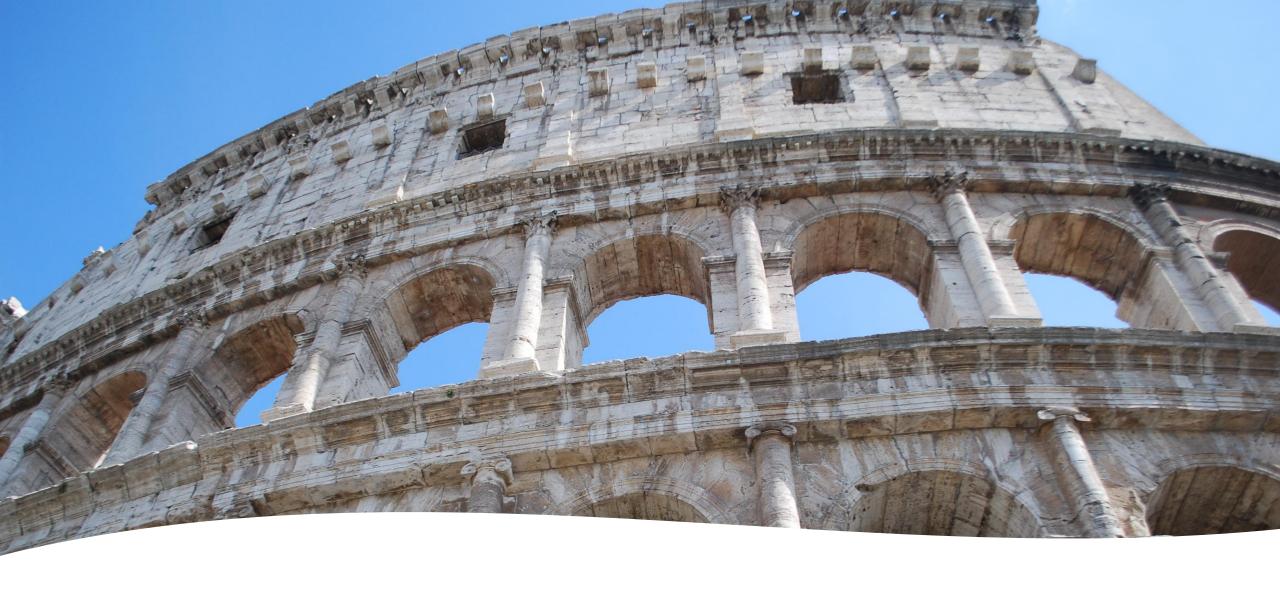

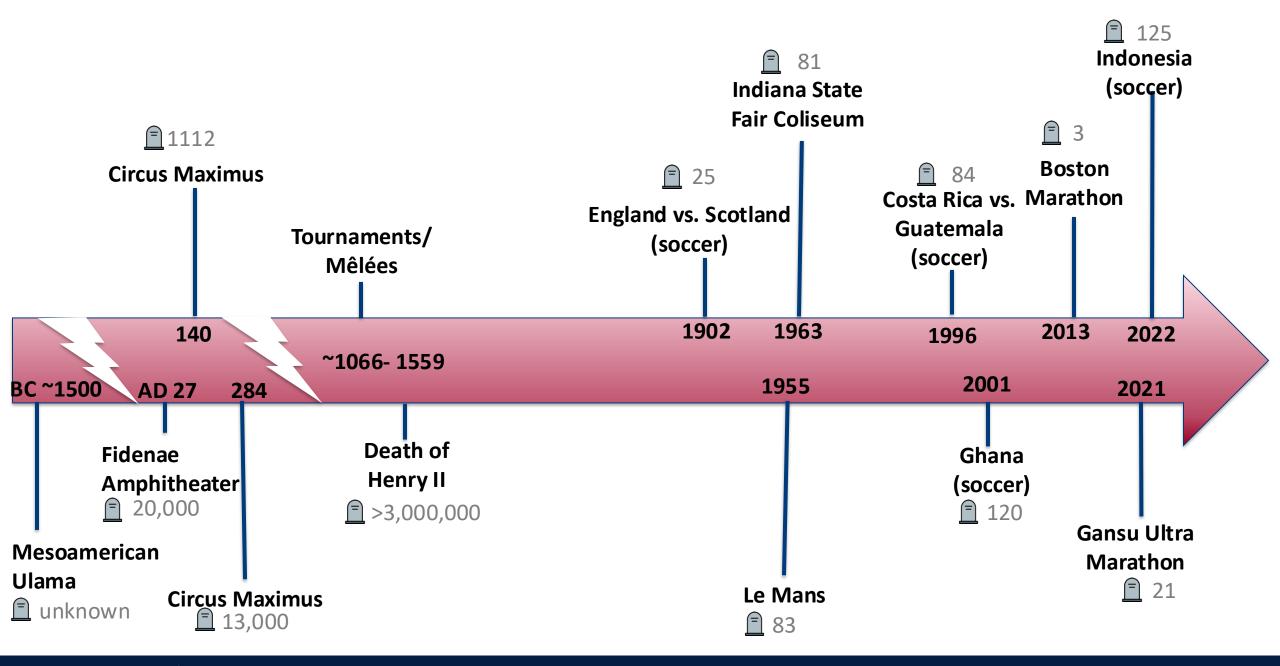

Disclosures

Defining Mass Casualty Incident (MCI)

"You need to specifically plan based on the size of the event you think you're going to have...

Even when someone gets hurt badly, it may still be just an 'event.'

It becomes a 'disaster' when your resources are overwhelmed.

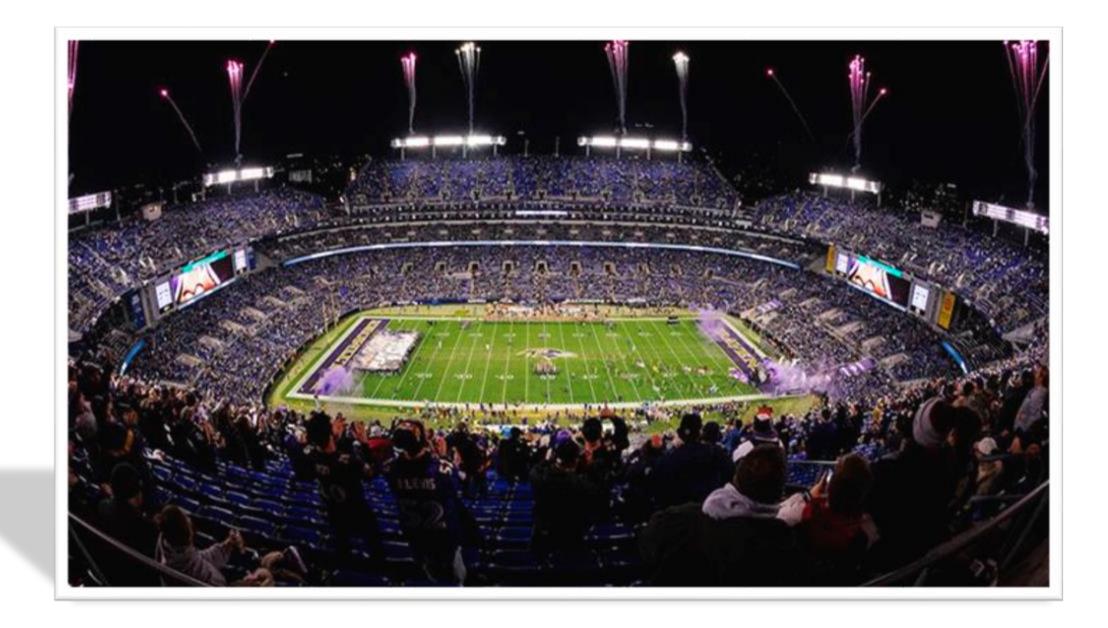

If you expect event medicine to handle your disaster, you've set yourself up for failure."

- David Persse, MD, medical director, Houston Fire Department

Risk Assessment- Understanding the Threats

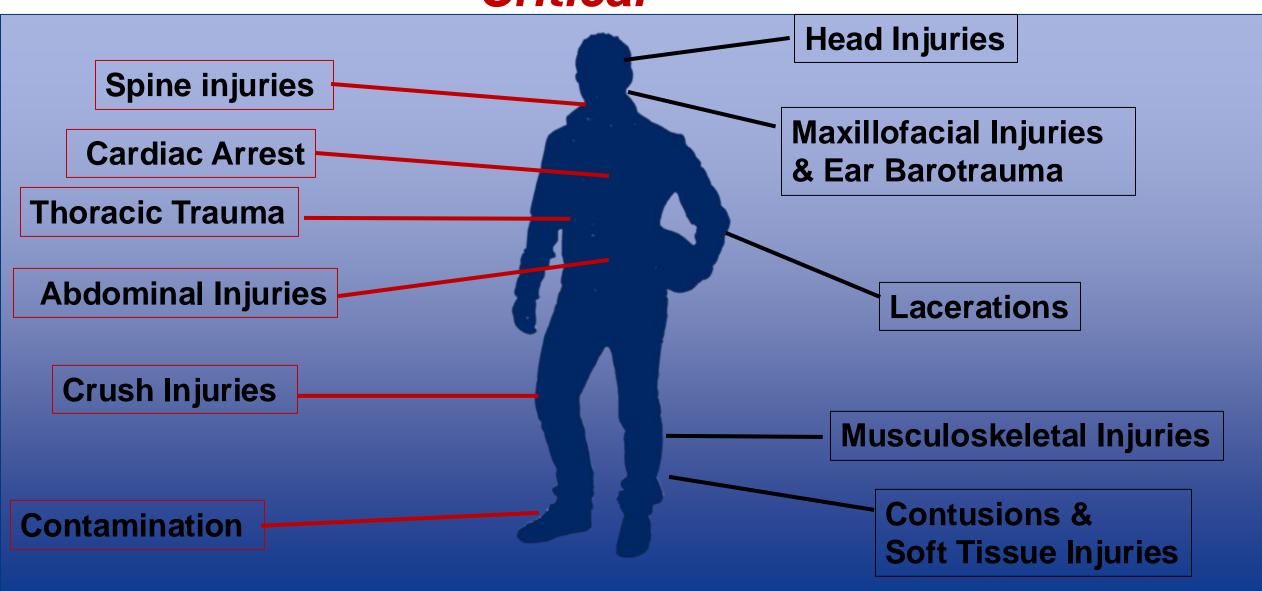

Prepare For Common Injuries Critical

Evacuation Planning

Team/Staff Evacuation

VIP Ticketholder Lounge **VIP Ticketholder** Lounge

Exit to 6th St

EMS/Ambulance
In tunnel by Visitor Bench

NHL Home Locker Room

Physicians/X-ray

NBA Home Locker Room

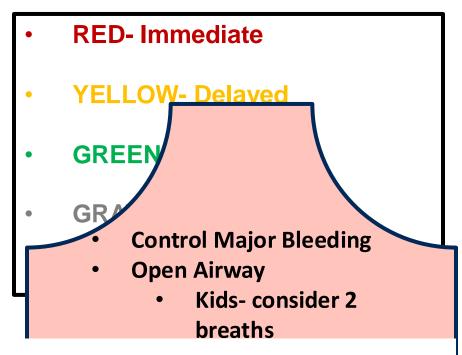

SALT Triage

Sort

Life Saving Interventions

Treatment/Transport

Sort

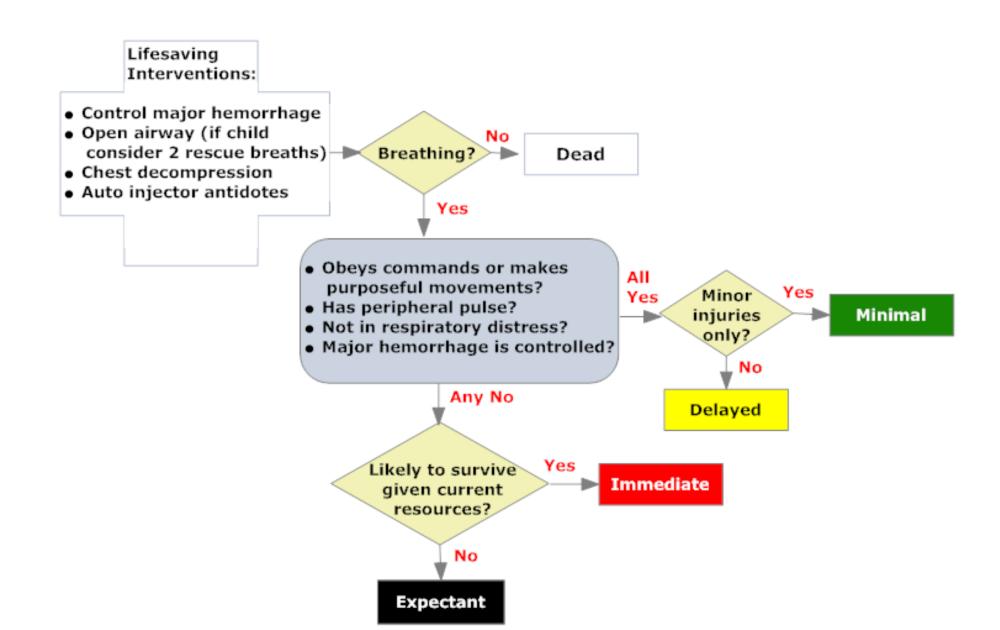

"If you can get up and walk, go to _____"

"If you need help, wave your hand, we'll come to you as quickly as possible"

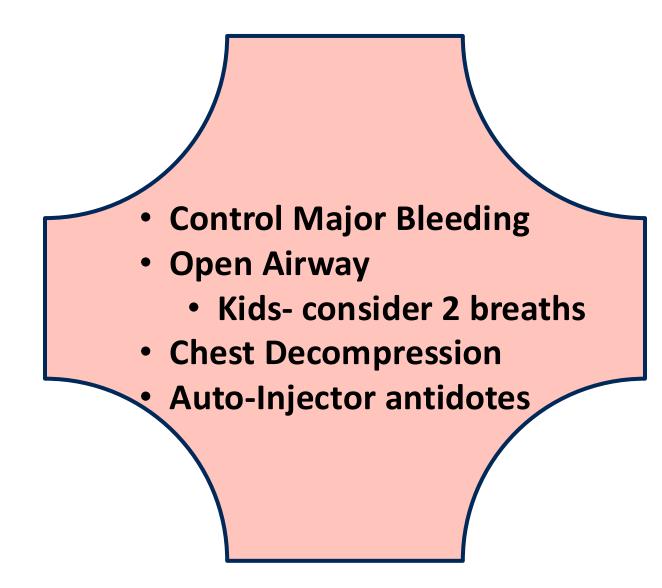

Go to the not-walking, not-waving patients first.

Assess

Step 2 - Assess: Individual Assessment

Life Saving Interventions

Treat/Transport: Five Categories

RED- Immediate

YELLOW- Delayed

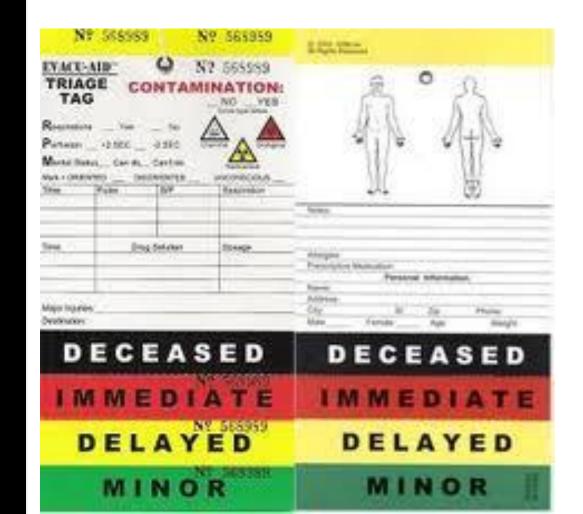

GREEN- Minor

GRAY- Expectant

BLACK- Deceased

Ways to Identify Patients

Triage Tags & Triage Tape

Other Options- START Triage

A = No respirations

B = RR > 30

C = Cap<2s / No Rad Pulse

D = Can't follow commands

Not green, red or black

Can walk away

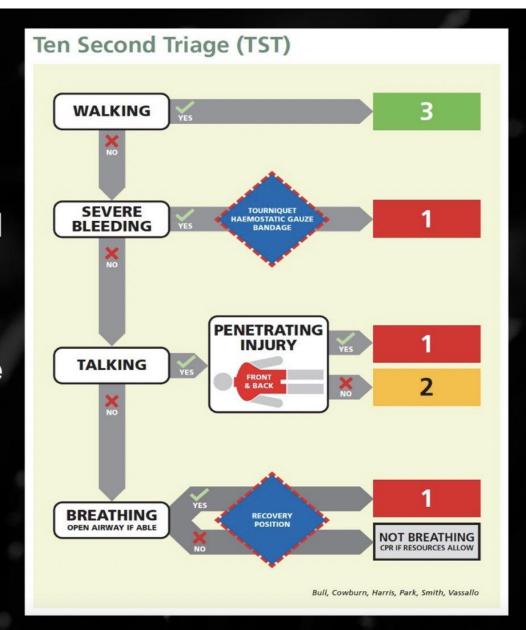

Other Options- 10-second Triage

Rapidly filters walking

No physiological measurements

Simple response check

Prioritises Unconscious

Pragmatic = 'real world' actions

Prioritises external bleeding

Prioritises central penetrating injury

Supports resus where able

PLAN

PREPARE V

PERFORM

"Remember- when disaster strikes, the time to prepare has passed."
