

## Breast cancer : INDIA

- Breast cancer is the most common cancer among women in India, accounting for a significant portion of female cancer cases and deaths.
- While incidence and mortality rates are rising, early detection and treatment are crucial for improving survival rates and outcomes.
- **High mortality:** India has a high number of breast cancer deaths, with a **mortality rate of 12.7 per 100,000 women**.
- A concerning trend is the increasing incidence of breast cancer in younger Indian women (between the ages of 30 and 40).
