- MINI STORAGES
- LODGES
- WAREHOUSES

**Examples of Special Shaped Buildings  
We Can Design and Fabricate for You..**

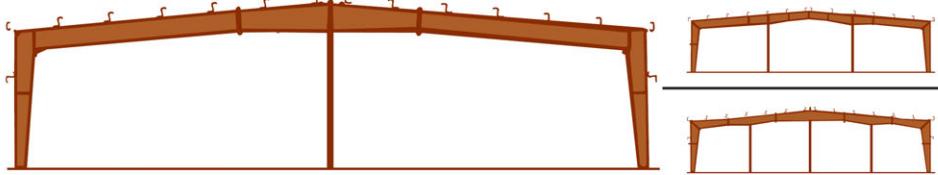

**AGRICULTURAL • COMMERCIAL • INDUSTRIAL**

# RIGID FRAME DESIGNS

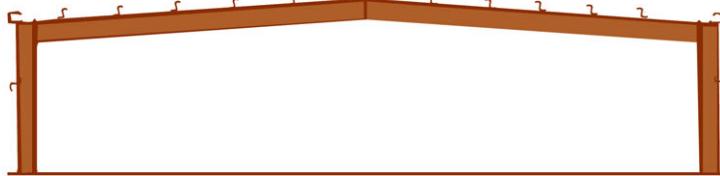

## CS Clear Span

Tapered columns and rafters give optimum clear span capabilities while keeping unused interior clearances at a minimum.

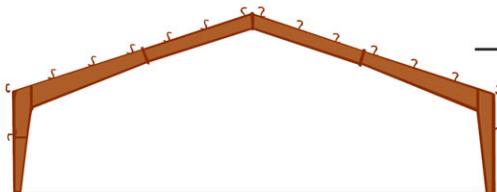

## MS Multi Span

Offers the most economical cost per square foot for buildings over 80' wide. Ideal design when interior columns are not objectionable.

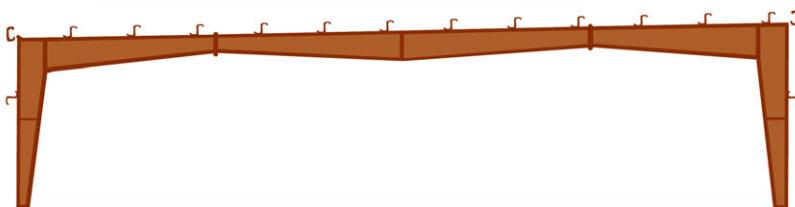

## CSS Clear Span

Straight columns and rafters. This design is common on smaller width buildings. Easy to finish the interiors.

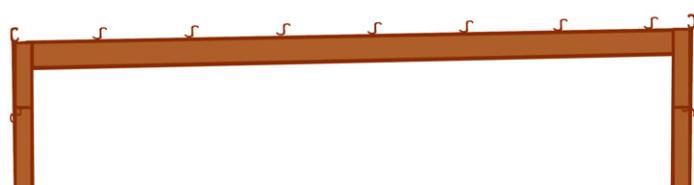

## HS High Span

Gives the same design benefits as the CS. Steeper pitch offers more interior height when required.

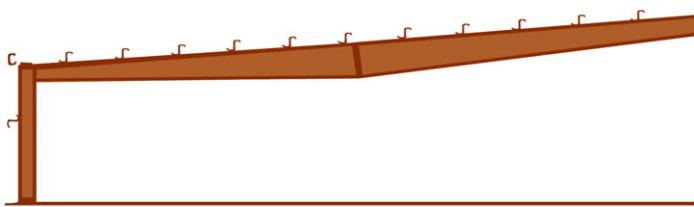

## SST Single Slope

Single slope, tapered columns. Especially suited for commercial stores. Offered with interior columns as well.

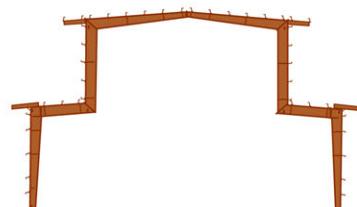

## SSS Single Slope

Single slope, straight columns. Best suited for smaller spans where interior floor space is essential. Also commonly used when adding to an existing building.

## LT Lean-To

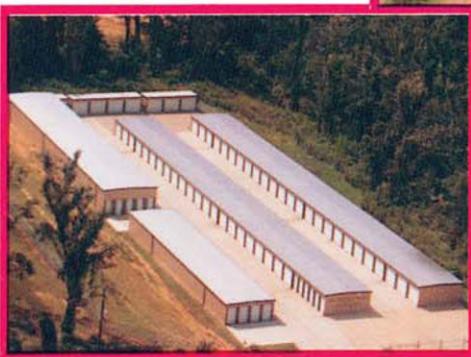

Used to add space at sides or ends. It differs from the single slope in that it must be supported on the high side by an adjoining building column.

## Custom Designs

Special framing systems can be provided to meet unusual building requirements.

# MINI STORAGES

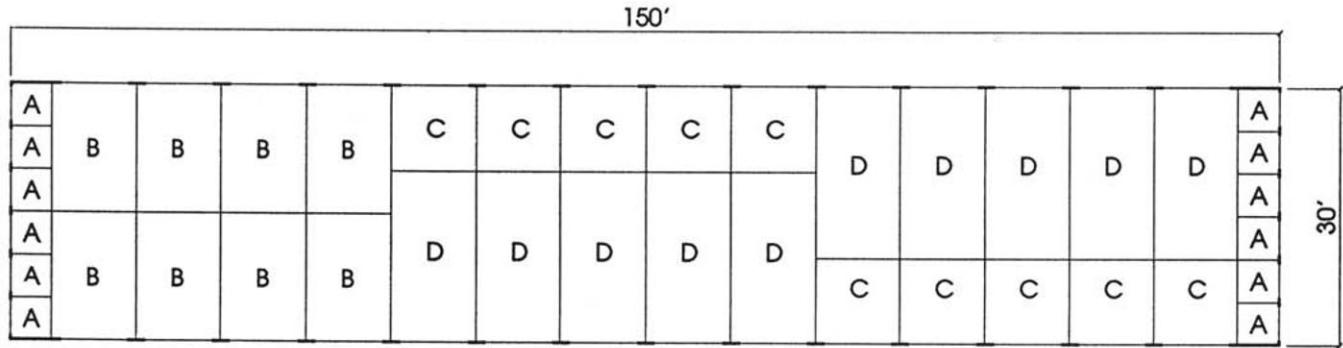

# WAREHOUSES

Choose from a variety of warehouse floorplans and typical layouts.

A = 5' x 5'

B = 10' x 15'

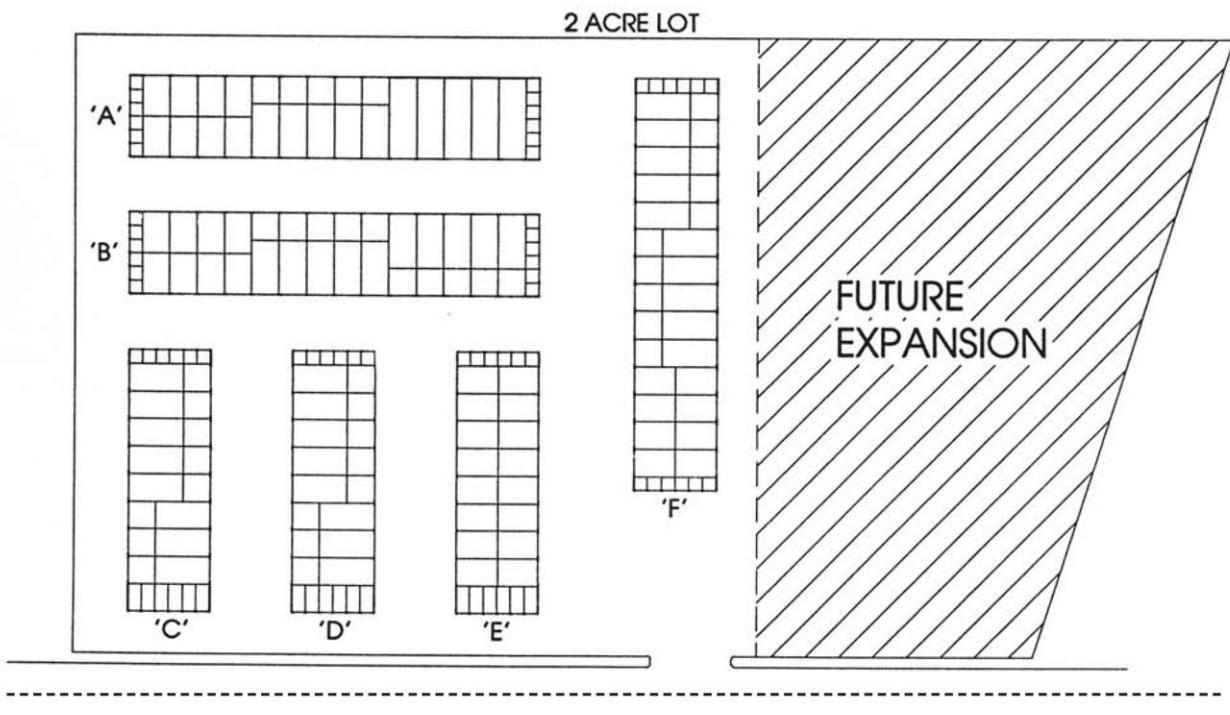

C = 10' x 10'

D = 10' x 20'
