

NOT ALL CLEAR ANODIZING IS THE SAME
 ARE YOU QUOTING WHAT IS SPECIFIED OR WHAT IS CHEAP?
WITH RACO YOU MEET THE SPEC!

Allows for less coverage of extruding streaks, die marks and blemishes resulting in variation in color/appearance and also loosens the fit of snap on trims.

NOTE>>>> Class I coating is a high performance anodic finish used primarily for exterior building products and other products that must withstand continuous outdoor exposure.

NOTE>>>> Class II coating is a commercial anodic finish recommended for interior applications or light exterior applications receiving regularly scheduled cleaning and maintenance such as storefronts.

NOTE>>>> Commercial anodizing is suitable for commodity products such as picture and mirror frames as well as residential shower stall doors and frames.
