

Microboost

Sugars and Stress Relief

About Microboost

MicroBoost is a natural blend of sugars, proteins, and acids that fuels plant growth and boosts photosynthesis. It energizes soil microbes and delivers essential nutrients to both plants and soil. Powered by Pursanova activated water technology, MicroBoost penetrates deeper into the soil and plant tissues for faster, more effective results.

Key Benefits:

- ✓ Boosts plant and soil biological activity
- ✓ Enhances plant growth and chlorophyll production
- ✓ Improves overall crop vigor and yield
- ✓ Reduces insect and disease pressure
- ✓ Increases water and mineral uptake
- ✓ Raises BRIX levels in fruits and grains
- ✓ Reduces plant stress for healthier crops
