

# BaCkbone

**Diverse carbon sources that feed soil biology and supercharge soil.**

Intensive agricultural practices have diminished the essential elements in the soil needed to sustain a robust and thriving soil microbial community.

## Benefits:

- Facilitates nitrogen assimilation
- Complexing agent (maintains nutrient availability throughout season)
- Humic, fulvic, organic and amino acids

## Product Information

- Tank mix compatible
- Pair with biologicals
- Pairs with any in-season nutrients and micronutrients

## Where should I use BaCkbone?

Use 1 pint to 1 gallon of BaCkbone in-season to improve nutrient deficiencies and imbalances, address soil microbial imbalances and provide resilience during drought conditions.
