

- Recycles crop residue into nutrients
- Bioprimes the soil for plant health
- Releases tied up nutrients
- Drives biological processes for enhanced carbon cycling
- Contains bacterial phages: natural predators to pathogenic fungi and bacteria
- Improves planter performance
- Improves germination and growth efficiency

BIO AG E BREAKDOWN

Application

- Tank mix compatible
- For enhanced results, pair with BaCkbone
- Apply 1-1.5 qts of Bio Ag E Breakdown postharvest to crop residue, with burndown or cover crop desiccation

Excess crop residue can cause a variety of issues for farmers:

- Cold wet spring soil
- Uneven germination
- Nitrogen tie-up
- Pest and disease habitat
- Equipment challenges

Where should I use Bio Ag E Breakdown?

- Diseased Soils
- Fields that are min till/no till
- Heavy Crop Residue
