

# Corn In-Furrow Micro Blend

If you are in need of balanced nutrition to help offset the high or low levels of P and K in your soil, you've come to the right place. Plants need a lot of zinc but need a balanced ratio of micronutrients early to enhance ear size. Balancing those nutrients to help offset a missing micronutrient is always a good idea. That's based on research done even at the university level and recommended by them. Formulating them to be more available from the start of the season and making them unreactive in mixes is also important. This allows you to blend them into any starter and foliar mix and make them successful and easy to use. That's what we do with In-Furrow Corn Micro Blend. A nice mix of zinc, manganese, copper and tiny amounts of boron are blended together to help round out your corn starter program and keep it simple. Micronutrients are necessary to get you that deep green color and hold it early. In conjunction with sulfur, programs that provide micronutrients are consistently some of the best yielding and visibly superior crops in the community. Yield enhancements are the primary reason to be using this product, especially if you are using high phosphate starters or are in fields with a long history of manure. Lots of phosphate ties up micronutrients and if you happen to have high pH, watch out! Your micronutrient availability is really struggling. Stop in and let us show you how to get your biggest bang for the buck out of your micronutrient program.

## Product Details

**3-0-0**

Apply 1-4 pints of Corn In-Furrow Micro Blend per acre. Apply in on-seed band, soil band, or foliar applications. Intended application to row crops and small grains.

Foliar Blend Plus is compatible with most liquid fertilizers and pesticides.

*Always perform a jar test prior to tank mixing.*

Total Nitrogen (N)	3.0%
3.0% Ammoniacal Nitrogen	
Boron (B)	0.1%
Cobalt (Co)	0.0008%
Copper (Cu)	0.50%
0.50% Chelated Copper	
Manganese (Mn)	1.00%
1.00% Chelated Manganese	
Molybdenum (Mo)	0.002%
Zinc (Zn)	4.00%
4.00% Chelated Zinc	

***Corn In-Furrow Micro Blend is a fertilizer for on-seed, banded, or foliar application to row crops as a nutritional supplement and to enhance crop growth and vigor.***

### Crop Applications:

Corn, Soybeans, Wheat
