

# Solace

How many times have you thought, I'd like to try foliar feeding but the situation on the crop is way too stressful and I think I'm wasting my time. Wasting time, money and effort is probably the number one reason people don't want to try foliar feeding. Aside from the fact they don't understand crop growth and when to address foliar technology, growers just don't want the risks. Well, that's changing now with the advent of Solace as a stress relief product from AgronomyRx. Solace is a product that delivers ethylene inhibition capabilities to your plant no matter what the conditions are. That means if it's too hot or too cold or too wet or too dry or a combination of any of the above, Solace can be used to keep stress down to a minimum on your crop. It's also so affordable, you can use it anytime during the season and as many times as you choose to employ it. Solace addresses the worst issue in the crop which is high temps and dry weather during reproduction to help reduce the temperature within the plant and keep it from drawing down its energy levels. Keeping that energy level up allows for yield conservation and gives the plant a fighting chance. Root production is normally slowed or stopped when ethylene production hits during stress and this product stops that in its tracks! It can be used alone, with sugars, with foliar passes and with pesticide applications without difficulty. Growers have used it in multiple pass programs with very good results and continue to increase the use of this product dramatically. Its low use rate of 4 oz per acre has even made its way into drone passes and made it highly successful. Call us today to see how you can move into success economically by building a base for your cropping season no matter what happens!

## Product Details

**0-0-19**

\* Apply 3-8 ounces of Solace per acre. Apply by sprayer or irrigation injection. Intended for foliar application to row crops and small grains.

Soluble Potash (K<sub>2</sub>O)

19.0%

Derived From: Potassium Hydroxide

Solace is compatible with most liquid fertilizers and pesticides.

*Always perform a jar test prior to tank mixing.*

***Solace is a potassium fertilizer for application to row crops as a nutritional supplement to enhance crop growth during stressful periods.***

### Crop Applications:

Corn, Soybeans, Wheat, Alfalfa
