

ENDOSIGHT®

confidence in a targeted application

As post-emergent herbicide, foliar nutrient, and fungicide passes approach, consider Endosight® nanotech adjuvant for improved chemistry intake. Please call to discuss the data that proves Endosight® efficacy for improved weed control, plant health, and increased yields.

**Endosight® offers great value
for less than \$3 / acre!**

Herbicide in plant tissue samples 24 hours after application:

Glyphosate: +23% increase / 2-4d +100% increase / dicamba +65%

Yield increases on tests of fungicide application:

Soybean yield tests: +3.3, +6.4, +7.2 bushels / acre

ENDOSIGHT®

confidence in a *targeted application*

Add Endosight® to your tank mix immediately after the chemistry products you want 'loaded' on the nanoparticles. A portion of the chemistry will adsorbed into the pores and onto the surface of Endosight® and enter the plant through the natural process of endocytosis, while remaining free chemistry will still enter through the typical process of diffusion. Put your spray pass on target with Endosight®!

Endosight® is an exclusive product of
