

Pflect-A

**VITAMEDI
VITAMIN C
SOLUTION**

...

01

Vitamedi is formulated to enable targetted Vitamin C treatment to the affected or problematic areas.

VITAMEDI - VITAMIN C GOAL

02

Provide high, pure & stable Vitamin C directly to skin, instead of taking orally or topically applied.

Vitamin C

General

Vitamin C comes in many forms. The most common choice is Ascorbic Acid. This delivers amazing benefits not only to skin, but to overall health. Unfortunately, Ascorbic Acid is a very sensitive ingredient and stability matters when it comes to potency.

Even though they are still effective when used topically or taken orally, factors like temperature, oxidation, pH level affects its efficacy.

Vitamedi

Vitamedi is a stable, sterile form of Vitamin C solution that can be used to treat pigmentation, inflammation, dullness and improve skin health.

USES

MESOTHERAPY

Can be combined with other mesotherapy solution to boost treatment.

NANO INFUSION

Can be done in combination with other treatments/ampoules for nano infusion.

MICRONEEDLING

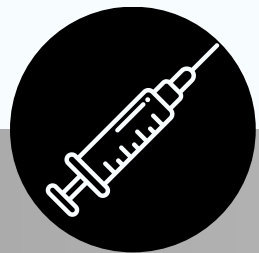

Can be done with deeper microneedling as solution is sterile.

INTRADERMAL

Superficially injected at 10-15 Degrees in micro bolluses.

SUGGESTED USE

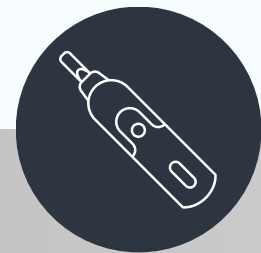

Suggested use of Vitamedi is a direct skin issue treatment.

INTRADERMAL

Instead of injecting all over the face as normal skin booster, focus on the area of problem.

IE: Melasma. Focus on injecting around and middle of the melasma.

MICRONEEDLING

Do a focus, stamping motion directly to the problem instead of moving pen in circles all over the face.

DURATION / SESSION

Use every 2 weeks for 4 sessions and maintain every 6-8 weeks.

Adjust according to skin issues.
