

TARGET RESULT

- Instruct the individual to look away from the fingerprint device, not to assist in the fingerprint process, and to relax. Grasp the individual's right hand at the base of the thumb with your right hand. Cup your hand over the individual's fingers, tucking under those fingers not being printed. Guide the finger being printed with your left hand.
- In order to take advantage of the natural movement of the forearm, the hand should be rotated *from the more difficult position to the easiest position*. This requires the thumbs be rolled toward and the fingers away from the center of the individual's body. Roll each finger from nail to nail in the appropriate space, taking care to lift each finger up after rolling to avoid smudging.
