# ADVANCED PLACEMENT PHYSICS C TABLE OF INFORMATION

## CONSTANTS AND CONVERSION FACTORS

Proton mass, $m_p = 1.67 \times 10^{-27}$ kg	Electron charge magnitude, $e = 1.60 \times 10^{-19}$ C
Neutron mass, $m_n = 1.67 \times 10^{-27}$ kg	1 electron volt, $1 \text{ eV} = 1.60 \times 10^{-19}$ J
Electron mass, $m_e = 9.11 \times 10^{-31}$ kg	Speed of light, $c = 3.00 \times 10^8$ m/s
Avogadro's number, $N_0 = 6.02 \times 10^{23}$ mol <sup>-1</sup>	Universal gravitational constant, $G = 6.67 \times 10^{-11}$ (N•m <sup>2</sup> )/kg <sup>2</sup>
Universal gas constant, $R = 8.31$ J/(mol•K)	Acceleration due to gravity at Earth's surface, $g = 9.8$ m/s <sup>2</sup>
Boltzmann's constant, $k_B = 1.38 \times 10^{-23}$ J/K	
1 unified atomic mass unit,	$1 \text{ u} = 1.66 \times 10^{-27}$ kg = 931 MeV/c <sup>2</sup>
Planck's constant,	$h = 6.63 \times 10^{-34}$ J•s = $4.14 \times 10^{-15}$ eV•s
	$hc = 1.99 \times 10^{-25}$ J•m = $1.24 \times 10^3$ eV•nm
Vacuum permittivity,	$\epsilon_0 = 8.85 \times 10^{-12}$ C <sup>2</sup> /(N•m <sup>2</sup> )
Coulomb's law constant, $k = 1/(4\pi\epsilon_0) = 9.0 \times 10^9$ (N•m <sup>2</sup> )/C <sup>2</sup>	
Vacuum permeability,	$\mu_0 = 4\pi \times 10^{-7}$ (T•m)/A
Magnetic constant, $k' = \mu_0/(4\pi) = 1 \times 10^{-7}$ (T•m)/A	
1 atmosphere pressure,	$1 \text{ atm} = 1.0 \times 10^5$ N/m <sup>2</sup> = $1.0 \times 10^5$ Pa

UNIT SYMBOLS	meter, m	mole, mol	watt, W	farad, F
	kilogram, kg	hertz, Hz	coulomb, C	tesla, T
	second, s	newton, N	volt, V	degree Celsius, °C
	ampere, A	pascal, Pa	ohm, Ω	electron volt, eV
	kelvin, K	joule, J	henry, H	

## PREFIXES

Factor	Prefix	Symbol
10 <sup>9</sup>	giga	G
10 <sup>6</sup>	mega	M
10 <sup>3</sup>	kilo	k
10 <sup>-2</sup>	centi	c
10 <sup>-3</sup>	milli	m
10 <sup>-6</sup>	micro	μ
10 <sup>-9</sup>	nano	n
10 <sup>-12</sup>	pico	p

## VALUES OF TRIGONOMETRIC FUNCTIONS FOR COMMON ANGLES

$\theta$	0°	30°	37°	45°	53°	60°	90°
$\sin \theta$	0	1/2	3/5	$\sqrt{2}/2$	4/5	$\sqrt{3}/2$	1
$\cos \theta$	1	$\sqrt{3}/2$	4/5	$\sqrt{2}/2$	3/5	1/2	0
$\tan \theta$	0	$\sqrt{3}/3$	3/4	1	4/3	$\sqrt{3}$	∞

The following assumptions are used in this exam.

- I. The frame of reference of any problem is inertial unless otherwise stated.
- II. The direction of current is the direction in which positive charges would drift.
- III. The electric potential is zero at an infinite distance from an isolated point charge.
- IV. All batteries and meters are ideal unless otherwise stated.
- V. Edge effects for the electric field of a parallel plate capacitor are negligible unless otherwise stated.

**Begin your response to QUESTION 1 on this page.**

**PHYSICS C: MECHANICS SECTION II Time—45 minutes**

**3 Questions**

**Directions:** Answer all three questions. The suggested time is about 15 minutes for answering each of the questions, which are worth 15 points each. The parts within a question may not have equal weight. Show all your work in this booklet in the spaces provided after each part.

If you are looking for a physics tutor in Florida, who can teach you AP and IB Physics, then you land on the right website because you might already know that Kumar sir has started online physics classes in Florida, then you can take advantage of it. You can directly contact Mr Kumar and clear all your concepts of physics. Kumar sir is a very experienced physics teacher, who has been teaching physics for more than 10 years. He has a very good command over the physics concepts and can help you in understanding the physics concepts. You can contact him at [kumarneet@gmail.com](mailto:kumarneet@gmail.com) or [www.kumarphysicsclasses.com](http://www.kumarphysicsclasses.com) or [www.kumarneetphysicsclasses.com](http://www.kumarneetphysicsclasses.com).

Note: Figure not drawn to scale.

1. A  $0.50 \text{ kg}$  fan cart is placed on a level, horizontal track of negligible friction, as shown. The fan is turned on, and the fan cart is released from rest and moves to the right. The cart travels along the horizontal track and then down an incline. Motion detector 1 measures the acceleration  $a$  of the cart from time  $t = 0$  to  $t = 3 \text{ s}$ . At  $t = 3 \text{ s}$ , the cart makes a smooth transition to the incline, and motion detector 2 measures the acceleration of the cart after  $t = 3 \text{ s}$ . The fan exerts the same magnitude of force on the cart during the entire motion. The graphs below show  $a$  as functions of  $t$ . For each motion detector, the positive direction is away from the detector.

MOTION DETECTOR 1

MOTION DETECTOR 2

**Continue your response to QUESTION 1 on this page.**

(a) On the dots below that represent the cart at two different locations, draw and label the forces (not components) that act on the cart at each location. Each force must be represented by a distinct arrow starting on, and pointing away from, the dot.

Cart on Horizontal Track

Cart on Incline

(b) Calculate the magnitude of the net force exerted on the fan cart when it is on the horizontal track.

$$\begin{aligned} F_{fan} &= (m_{cart}) (a_c) \\ &= (0.50) (0.8) = 0.40 \text{ N} \end{aligned}$$

(c) Calculate the angle  $\theta$  of the incline.

$$f_{\text{fan}} + mg \sin \theta = ma_2$$

$$mg \sin \theta = ma_2 - f_{\text{fan}}$$

$$\sin \theta = \frac{ma_2 - f_{\text{fan}}}{mg}$$

$$\sin \theta = \frac{(0.50)(2.4) - (0.50)(0.8)}{(0.50)(9.8)}$$

$$\theta = 9.40$$

**KUMAR PHYSICS CLASSES**

E 281 BASEMENT M BLOCK MAIN ROAD GREATER KAILASH 2 NEW DELHI

**9958461445, 01141032244**

[www.kumarphysicsclasses.com](http://www.kumarphysicsclasses.com)

[www.kumarneetphysicsclasses.com](http://www.kumarneetphysicsclasses.com)

(d) Suppose careful measurement determines the angle of the incline to be  $3^\circ$  larger than that calculated in part (c). Consider the following explanation.

"The scale used to measure the mass of the fan cart was not calibrated properly before the measurement, and this could account for the observed difference in the angle."

Does the explanation sufficiently account for the observed discrepancy? ----- Yes ☒ No

Justify your answer.

From the answer (c)

$$\sin \theta = \frac{ma_2 - f_{\text{fan}}}{mg} = \frac{ma_2 - ma_1}{mg}$$

$\rightarrow$  Hence mass of the cart cancels out the equation used to find the angle of the incline

**Continue your response to QUESTION 1 on this page.**

The experiment is repeated for several trials, each with a different angle for the incline. The acceleration of the cart down the incline is measured for each angle. The graph below shows the plot of the acceleration  $a$  of the cart as a function of the sine of the angle  $\sin \theta$ .

(e)

i. Draw a best-fit line for the data.

ii. Using the straight line, calculate an experimental value for the acceleration due to gravity  $g$ .

(f) If the cart were replaced with a second cart of mass 1.0 kg that has a fan that exerts the same magnitude of force as the original fan, explain how the graph given in part (e) would change.

$$\text{slope} = \frac{\Delta a}{\Delta \sin \theta} = \frac{5-1}{(0.42-0.04)} = 10.52 \text{ m/s}^2$$

$$ma = f_{\text{fan}} + mg \sin \theta$$

$$a = g \sin \theta + \frac{f_{\text{fan}}}{m}$$

$$y = mx + b = (\text{slope}) \sin \theta + g \text{ intercept}$$
$$\text{slope} = g = 10.52 \text{ m/s}^2$$

Begin your response to QUESTION 2 on this page.

Note: Figure not drawn to scale.

2. A block of mass  $m$  starts from rest at point A and travels with negligible friction through the loop onto a horizontal surface, where the block makes contact with a spring of spring constant  $k = \frac{mg}{2R}$ . All motion of the spring is in the horizontal direction. Point C is the highest point on the loop, and point B is the rightmost point on the loop. Express all algebraic answers in terms of  $m$ ,  $h$ ,  $R$ , and physical constants, as appropriate.

(a) On the dot below, which represents the block, draw an arrow that represents the direction of the acceleration of the block at point B in the figure above. The arrow must start on and point away from the dot.

Justify your answer

$a_c \rightarrow$  centripetal component  
towards the centre

$a_{\text{downward}} = g$

$$a_{\text{NET}} = \sqrt{g^2 + a_c^2}$$

(b)

i. Derive an expression for the speed  $v$  of the block at point B.

Apply conservation of energy at point A & point B.

$$(TE)_A = (TE)_B$$

$$mgh + \frac{1}{2}m(0)^2 = mgR + \frac{1}{2}mv_B^2$$

$$mg(h-R) = \frac{1}{2}mv_B^2 \Rightarrow v_B = \sqrt{2g(h-R)}$$

Note: Figure not drawn to scale.

ii. Derive an expression for the magnitude of the net force  $F$  on the block at point B.

$$\begin{aligned} F_{\text{net}} &= \sqrt{(mg)^2 + (F_c)^2} \\ &= \sqrt{m^2g^2 + \left(\frac{mv_B^2}{R}\right)^2} \\ &= \sqrt{m^2g^2 + \left(\frac{2mg}{R}(h-R)\right)^2} \end{aligned}$$

Note: Figure not drawn to scale.

Continue your response to QUESTION 2 on this page.

(c) In terms of  $R$ , derive an expression for the minimum height  $h_{\min}$  necessary for the block to maintain contact with the track through point C.

$$(TE)_A = (TE)_C$$

$$mgh_A + \frac{1}{2}m\cancel{v_A^2} = mg(2R) + \frac{1}{2}mv_C^2$$

$$mgh = mg(2R) + \frac{1}{2}mv_C^2$$

$$gh = g(2R) + \frac{v_C^2}{2}$$

$$v_C = \sqrt{2g(h-2R)}$$

$$\sqrt{gR} = \sqrt{2g(h-2R)}$$

$$R = 2(h-2R)$$

$$R = 2h - 4R$$

$$2h = 5R \Rightarrow h = \frac{5R}{2} = 2.5R$$

Note: Figure not drawn to scale.

For point C, minimum velocity to complete the circular motion, for which  $N=0$

$$mg + N = \frac{mv_C^2}{R} \Rightarrow \text{but } N=0 \Rightarrow v_C = \sqrt{gR}$$

(d) It is determined that  $h = 0.30 \text{ m}$  and  $R = 0.10 \text{ m}$ . If the block is released from a height greater than that found in part (c), what would be the maximum compression  $x_{\max}$  of the spring?

$$mgh = \frac{1}{2} k x_{\max}^2$$

$$2mgh = k x_{\max}^2 \Rightarrow x_{\max} = \sqrt{\frac{2mgh}{k}}$$

$$= \sqrt{\frac{2mgh}{mg/2R}} = \sqrt{4hR}$$

$$= \sqrt{(4)(0.30)(0.10)}$$

$$= 0.35 \text{ m}$$

**KUMAR PHYSICS CLASSES**

F-281 BASEMENT M BLOCK MAIN ROAD GREATER KAILASH 2 NEW DELHI

9958461445, 01141032244

[www.kumarphysicsclasses.com](http://www.kumarphysicsclasses.com)

[www.kumarneetphysicsclasses.com](http://www.kumarneetphysicsclasses.com)

(e) A graph of the maximum compression of the spring as a function of height is shown below. The height  $h_{\min}$  is the height calculated in part (c).

i. Explain why section I appears as a horizontal line segment on the horizontal axis.

Block does not make it through the loop at this height so it can not reach near to spring

ii. Explain the reason for the shape of section II on the graph.

$$mgh = \frac{1}{2} kx^2$$

$$h \propto x^2$$

Hence parabolic

Begin your response to QUESTION 3 on this page.

3. A triangular rod of length  $L$  and mass  $M$  has a nonuniform linear mass density given by the equation  $\lambda = \gamma x^2$  where  $\gamma = \frac{3M}{L^3}$  and  $x$  is the distance from point  $P$  at the left end of the rod.

(a) Using integral calculus, show that the rotational inertia  $I$  of the rod about an axis perpendicular to the page and through point  $P$  is  $\frac{3}{5} M L^2$ .

$$\begin{aligned} dI &= dm x^2 \\ &= \lambda dx x^2 \\ \int dI &= \gamma x^2 dx x^2 = \int_0^L \gamma x^4 dx \\ I &= \gamma \left[ \frac{x^5}{5} \right]_0^L = \frac{\gamma}{5} [L^5 - 0^5] \\ &= \frac{\gamma}{5} L^5 = \frac{3M}{L^3 (5)} L^5 = \frac{3}{5} M L^2 \end{aligned}$$

$$\begin{aligned} \frac{dm}{dx} &= \lambda \\ dm &= \lambda dx \end{aligned}$$

(b) Determine the horizontal location of the center of mass of the rod relative to point P. Express your answer in terms of L.

$$x_{cm} = \frac{\int dm x}{\int dm}$$

$$= \frac{\int_0^L \lambda x dx}{\int_0^L \lambda dx} = \frac{\int_0^L \gamma x^2 x \cdot dx}{\int_0^L \gamma x^2 dx} = \frac{\int_0^L \gamma x^3 dx}{\int_0^L \gamma x^2 dx}$$

$$= \frac{\gamma \left[ \frac{x^4}{4} \right]_0^L}{\gamma \left[ \frac{x^3}{3} \right]_0^L} = \frac{\cancel{\gamma} \left[ \frac{L^4}{4} - 0 \right]}{\cancel{\gamma} \left[ \frac{L^3}{3} - 0 \right]} = \frac{L^4 (3)}{4 \cdot L^3} = \frac{3L}{4}$$

$$\frac{dm}{dx} = \lambda \Rightarrow dm = \lambda dx$$

(c) For an axis perpendicular to the page, is the value of the rotational inertia of the rod around point P greater than, less than, or equal to the value of the rotational inertia of the rod around the rod's center of mass?

✓ Greater than \_\_\_\_\_ Less than \_\_\_\_\_ Equal to Justify your answer.

$$I_P = I_C + M (x_{cm})^2 \quad \text{— As per perpendicular axis theorem}$$
$$I_P > I_C$$

**Continue your response to QUESTION 3 on this page.**

The rod is released from rest in the position shown, and the rod begins to rotate about a horizontal axis perpendicular to the page and through point P.

(d) On the axes below, sketch graphs of the magnitude of the net torque  $\tau$  on the rod and the angular speed  $\omega$  of the rod as functions of time  $t$  from the time the rod is released until the time its center of mass reaches its lowest point.

$$\tau = \vec{r} \times \vec{f}$$

$$= \text{force} \times \perp \text{ distance}$$

$$\omega = \omega_0 + \alpha t$$

(e) As the rod rotates from the horizontal position down through vertical, is the magnitude of the angular acceleration on the rod increasing, decreasing, or not changing?

----- Increasing ----- ☒ Decreasing ----- Not changing Justify your answer.

$$\tau = \vec{r} \times \vec{f} = I(\alpha)$$

$$r f \sin \theta = I(\alpha)$$

As  $\theta$  approaches to zero hence Torque is also approaching to zero, hence angular acceleration tends to zero.

(f) The mass of the rod is 3.0 kg, and the length of the rod is 1.0 m. Calculate the linear speed  $v$  of point S as the rod swings through the vertical position shown.

$$\begin{aligned}
 Mgh &= \frac{1}{2} I \omega^2 \\
 \cancel{M} g \left( \frac{3}{4} L \right) &= \frac{1}{2} \left( \frac{3}{5} \cancel{M} L^2 \right) \left( \frac{v}{L} \right)^2 \\
 \frac{\cancel{M} g L}{2} &= \frac{1}{2} \left( \frac{3}{5} \right) \frac{v^2}{\cancel{L}} \\
 v &= \sqrt{\frac{5 g L}{2}} = \sqrt{\frac{5 \times 9.8 \times 1}{2}} = 4.9 \text{ m s}^{-1}
 \end{aligned}$$

AP Physics Tutor, AP Physics Tutors in Dubai, AP Physics Tutors in Canada, AP Physics Tutors in France, AP Physics Tutors in Singapore, AP Physics Tutors in Malaysia, AP Physics Tutors in Japan, AP Physics Tutors in Germany, AP Physics Tutors in Denmark, AP Physics Tutors in United Kingdom, AP Physics Tutors in Switzerland, AP Physics Tutors in Australia, AP Physics Tutors in Indonesia, AP Physics Tutors in Finland, AP Physics Tutors in Poland, AP Physics Tutors in India, IB Physics Worldwide, IB Physics Tutors in Dubai, IB Physics Tutors in Canada, IB Physics Tutors in France, IB Physics Tutors in Singapore, IB Physics Tutors in Malaysia, IB Physics Tutors in Japan, IB Physics Tutors in Germany, IB Physics Tutors in Denmark, IB Physics Tutors in United Kingdom, IB Physics Tutors in Switzerland, IB Physics Tutors in Australia, IB Physics Tutors in Indonesia, IB Physics Tutors in Finland, IB Physics Tutors in Poland, IB Physics Tutors in India, IGCSE Physics Tutor, IGCSE Physics Tutors in United Arab Emirates, IGCSE Physics Tutors in Canada, IGCSE Physics Tutors in China, IGCSE Physics Tutor Singapore, IGCSE Physics Tutors in Malaysia, IGCSE Physics Tutors in Japan, IGCSE Physics Tutors in Germany, IGCSE Physics Tutors in Denmark, IGCSE Physics Tutor United Kingdom, IGCSE Physics Tutors in Switzerland, IGCSE Physics Tutors in Australia, IGCSE Physics Tutors in Indonesia, IGCSE Physics Tutors in Finland, IGCSE Physics Tutors in Poland, IGCSE Physics Tutors in India, AP Physics in USA and Canada, AP Physics Tutors in United States, AP Physics Tutors in Miami, AP Physics Tutors in Chicago, AP Physics Tutors in Dallas, AP Physics Tutors in Houston, AP Physics Tutors in Los Angeles, AP Physics Tutors in New York City, AP Physics Tutors in Philadelphia, AP Physics Tutors in San Francisco, AP Physics Tutors in San Jose, AP Physics tutors in Washington D.C., AP Physics tutors in Canada, IB Physics in USA and Canada, IB Physics Tutors in United States, IB Physics Tutors in Atlanta, IB Physics Tutors in Chicago, IB Physics Tutors in Dallas, IB Physics Tutors in Houston, IB Physics Tutors in Los Angeles, IB Physics Tutors in New York City, IB Physics Tutors in Philadelphia, IB Physics Tutors in San Francisco, IB Physics Tutors in San Jose, IB Physics Tutors in Washington D.C., IB Physics Tutors in Canada
