**Systematic
Preparation
For
NEET/IIT
Exam**

**Do Cbse Physics
Plus Neet Physics
Together**

Students who are preparing for the NEET exam, it is very important for them to know that physics is the most important subject in the NEET exam. Even if it comes, then two or three out of 45 questions, so if any student has to clear the NEET exam in the first attempt, then one should pay a lot of attention to the physics paper or the exam if he or she attempts 45 in the physics paper. If 42 questions are correct, then it is almost certain to pass the neet exam, so always while preparing for neet exam, we have to pay attention to how we should pass the physics exam, for that first we need to do small things of physics. We have to pay attention to the question so that our mental development and concept clarity become very good. Then after that, we have to apply NCERT well once, after applying NCERT well, we have to pay attention to what we should do above it. We need to go up Professor H C Verma's book in which there are many MCQ's at the end of every chapter.

There are two types of physics in NEET exam, first physics depends on mechanics, second physics is based on electricity, apart from this, new generation physics, which we speak of modern physics and wave optics also contribute, then we have to It is to understand that what type of physics we should start studying first of all we have to pay attention to mechanic and to know this we need to know vector very much if we know about VECTOR then we can solve mechanic very easily And we can easily do any type of question, after that we should also have knowledge about some type of mathematics which is called Differentiation and Integration, so much is enough for us to study Mechanic if we know Vector Kinematics And if we know Newton's law then it will be very easy for us to read the chapter Gravitational and Rotational Motion after that, after that it is also very important for us to have knowledge of some mathematical functions like sine

wave and cosine wave if we will know that we can use it in Simple Harmonic Motion. In addition, how it can be used.

Students, now we talk about class 12 physics, class 12 physics is believed to be much easier than class 11 physics as we know that class 11 does not have a lot of theories, but numerical questions are enough. And they were difficult too, and to understand them, we should also know a lot of maths but in class 12th, derivatives are also many, but the questions were not much difficult. Class 12 starts electrostatic Chapter 2 then comes current and electricity which is a very easy chapter, if we do not face any kind of obstacle in these chapters of the beginning, then we can very easily do the third chapter Magnetic Effect of Current, after that the chapter we Studying in class 12, it is on alternating current, as we know there are two types of electricity, number one, Direct current number second alternating Current.

A few years ago, direct current was used in our country, but as the development progressed, new devices came, now different types of electricity are required to run new equipment, for those scientists have developed a new type of electricity. Invented the name of Alternating Current. Alternating Current can be used very easily in Capacitor Inductor, so nowadays the electricity that comes to our house is Alternating Current. Alternating Current can send more electricity far away than Direct Current. That's why this chapter is considered very useful in class 12. After that, after that we come to Ray Optics which is based on light. After that, after that comes wave optics, which has a lot of uses of maths,, and there are many good types of numerical. Mathematics is needed to understand. At last ,we have the chapter of Modern Physics and Semiconductor Devices. These chapters are very easy in the NEET exam. First of

all, every student should try to study on his or her own because physics is a subject that you can understand by practicing, but still, if you find it difficult to understand the subject, then you must immediately take help from a good teacher for that. Because in today's era the competition is becoming very difficult, but if we study properly, then we can get success. As I said, nowadays it is a very tough competition,, and if we get such a teacher, we pass that tough competition. It is known that who can explain us the concept of physics more properly in less time and help us in doing different types of concepts, then we should not hesitate and should definitely take help so that we can clear the NEET exam on the basis of good marks. And as we know, physics has a big role to clear NEET exam if you want help of PHYSICS then you can contact Kumar physics classes which will help you to understand physics well in an easy concepts. Explain, and you will reach your goal .You will be able to get Mr. Kumar. The teacher is counted among very high-class teachers in the whole of India, so you can get his confidence.
