

## Wet Age-Related Macular Degeneration

### **Living with vision loss due to neovascular (wet) age-related macular degeneration (AMD)? Interested in a potential new treatment?**

We are looking for people to take part in a clinical research study to help us learn more about an investigational medication for **neovascular (wet) age-related macular degeneration (AMD)**. The investigational medication has been designed to work differently from currently available treatments. We are trying to find out if the investigational medication may result in an improvement of vision.

#### **Are you able to help?**

You (or someone you know) may be able to take part in the ShORe Study if you:

- **are at least 50 years of age**
- **have been diagnosed with, or experience symptoms of, wet AMD**
- **have not yet received any treatment for your wet AMD.**

The study will last just under 2 years (102 weeks) and will require regular visits to our study center. Your health will be monitored carefully by a team of doctors and nurses throughout the study.

**All study-related medications and assessments will be provided at no cost to you.**

**Please contact the study team today** if you have questions or are interested in joining the ShORe Study. You are under no obligation to take part in the study. Let us help you get started today.

**Macula Vitreous Retina Physicians & Surgeons**

**Petros Carvounis, MD FRCSC**

**Appointment Line: (713) 637-4408**
