

AN INITIATIVE TO STRENGTHEN FLORIDA'S CRITICAL INFRASTRUCTURE

Welcome to the CyberSecureFlorida initiative, pursuant to House Bill 5001, Appropriation 2944B, a first-of-its-kind effort to assess the cybersecurity strengths and weaknesses of Florida's collective critical infrastructure. The information gathered through this effort will be critical to helping Florida's elected leaders determine how best to allocate resources and enact appropriate legislation to create a more secure Sunshine State!

Led by Cyber Florida in consultation with the Florida Cybersecurity Advisory Council, this effort will

- Establish a baseline of current critical infrastructure cybersecurity protections
- Provide actionable solutions to increase the state's preparedness and resilience to cyberattacks
- Reduce the vulnerabilities of critical systems, assets, and networks
- Increase resiliency and security to protect the people, property, and prosperity of Florida

HOW WILL THE ASSESSMENT WORK?

The assessment will consist of an online survey of about 150 questions that address a range of cybersecurity concerns as outlined by the NIST Cybersecurity Framework. The survey should be completed by each organization's IT/OT cybersecurity systems and applications lead and their team members. Responses will be confidential, and all data will be aggregated and anonymized prior to public release to ensure respondents' privacy and security. Data will be synthesized into a concise, actionable report to inform future resource allocation and legislation. The CSET has launched and is ready for your submissions.

If you have questions about the initiative, are struggling with some aspect of the CSET tool, or need clarification on an assessment question, please join us for an Ask a CSET Expert webinar. The webinars will be held twice weekly from November 1 through January 5. Register here: cyberflorida.org/cybersecureflorida.

WHO SHOULD PARTICIPATE?

CyberSecureFlorida is open to all public- and private-sector critical infrastructure entities and we encourage any and all critical infrastructure entities to lend their voice to this important undertaking. Each CI participant will be able to print or download their own risk assessment from the CSET tool.

Cyber Florida is working to build a coalition of critical infrastructure organizations committed to Florida's collective cyber resiliency. If you would like to help Cyber Florida build a community of collective security, please visit cyberflorida.org/cybersecureflorida/ and sign up as a Program Partner!

The online risk assessment tool, CSET, is now LIVE!
